Hilda L. Solis, Secretary

U.S. Bureau of Labor Statistics
Keith Hall, Commissioner

July 2010

Bulletin 2748

Preface

Annual data on the labor force, employment, and unemployment in States and substate areas are available from two major sources: the Current Population Survey (CPS) and the Local Area Unemployment Statistics (LAUS) program. The CPS is a sample survey of about 60,000 households nationwide conducted for the U.S. Bureau of Labor Statistics (BLS) by the Census Bureau. The LAUS program is a Federal-State cooperative endeavor in which State workforce agencies prepare estimates using concepts, definitions, and estimation procedures prescribed by BLS.

This bulletin presents 2009 annual averages from the CPS for census regions and divisions; the 50 States and the District of Columbia; and 54 large metropolitan areas, 22 metropolitan divisions, and 41 principal cities. Data from the CPS differ from the official estimates produced by the individual States through the LAUS program. CPS estimates are provided herein because they are a current source of information on the demographic and economic characteristics of the labor force in subnational areas, from the same source as the official labor force data for the U.S. as a whole.

Tables 1 through 13 present 2009 annual average labor force estimates for census regions and divisions. Similar information for all States and the District of Columbia appears in tables 14 through 26. All of these data reflect Census 2000-based population controls.

Tables 27 through 32 display 2009 annual average rates, ratios, and percent distributions from the CPS for selected metropolitan areas, metropolitan divisions, and cities. Levels for the various labor force categories are not presented, because independent census-based population controls are not available below the State level.

Geographic definitions for the metropolitan areas and metropolitan divisions appearing in this publication reflect those first issued by the Office of Management and Budget (OMB) on June 6, 2003, with titles updated per OMB Bulletin No. 09-01, *Update of Statistical Area Definitions and Guidance on Their Uses*, dated November 20, 2008. (See appendix C.)

The data in this bulletin reflect revisions to the standards for classification of Federal data by race and ethnicity that were issued by OMB on October 30, 1997. Estimates for the White, Black or African American, and Asian race groups are based on the persons who reported only one of those race groups. Persons who reported another race group or two or more races are not included in any of these categories, but are included in the totals. Persons whose ethnicity was identified as Hispanic or Latino may be of any race and, therefore, were classified by ethnicity, as well as by race.

Tables displaying occupation and industry data reflect the coding systems used for those data in Census 2000.

This bulletin was prepared in the BLS Office of Employment and Unemployment Statistics by the Division of Local Area Unemployment Statistics in collaboration with the Division of Data Development and Publications. Editorial assistance was provided by the Office of Publications and Special Studies.

Information in this bulletin is available to sensory impaired individuals upon request. Voice phone: 202-691-5200; Federal Relay Service: 1-800-877-8339. This material is in the public domain and, with appropriate credit, may be reproduced and without permission.

Section I. Estimates for Census Regions and Divisions	2
Tables: Census regions and divisions, 2009 annual averages:	
1. Employment status of the civilian noninstitutional population, by sex, age, race, Hispanic or Latino ethnicity, and marital status	3
2. Employment status of the civilian noninstitutional population 25 years and over, by educational attainment	10
3. Employed and unemployed persons by full- and part-time status, sex, age, race, and Hispanic or Latino ethnicity	12
4. Employment status of the experienced civilian labor force, by occupation	16
5. Percent distribution of employed persons by occupation, sex, race, and Hispanic or Latino ethnicity	20
6. Employment status of the experienced civilian labor force, by industry	27
7. Percent distribution of employed persons by industry, sex, race, and Hispanic or Latino ethnicity	35
8. Employed persons by class of worker, sex, race, and Hispanic or Latino ethnicity	49
9. Persons at work by sex, age, race, Hispanic or Latino ethnicity, and hours of work	52
10. Persons at work 1 to 34 hours, by sex, race, Hispanic or Latino ethnicity, usual full- or part-time status, and reason for working less than 35 hours	55
11. Employed persons with a job but not at work, by sex, race, Hispanic or Latino ethnicity, and reason not at work	58
12. Unemployed persons by sex, age, race, Hispanic or Latino ethnicity, and reason for unemployment	61
13. Unemployed persons by sex, age, race, Hispanic or Latino ethnicity, and duration of unemployment	64
Section II. Estimates for States	67
Charts:	
1. Unemployment rates by State, 2009 annual averages	68
2. Employment-population ratios by State, 2009 annual averages	68
Tables: States, 2009 annual averages:	
14. Employment status of the civilian noninstitutional population, by sex, age, race, Hispanic or Latino ethnicity, and marital status	69
15. Employment status of the civilian noninstitutional population 25 years and over, by educational attainment	95
16. Employed and unemployed persons by full- and part-time status, sex, age, race, and Hispanic or Latino ethnicity	101
17. Employment status of the experienced civilian labor force, by occupation	109
18. Percent distribution of employed persons by occupation, sex, race, and Hispanic or Latino ethnicity	113
19. Employment status of the experienced civilian labor force, by industry	120

C. Geographic Boundary Definitions	329

Geographic Profile of Employment and Unemployment, 2009

The Current Population Survey (CPS) is the regular monthly survey of about 60,000 households from which the national unemployment rate is derived. (See appendix A for concepts and definitions used in the CPS and appendix B for a description of the estimation procedures.)

The method for determining which annual average estimates of the labor force—by demographic characteristics (age, sex, race, and Hispanic or Latino ethnicity) and economic characteristics of the employed and unemployed—to publish in this bulletin is explained in appendix B. Table B-1 lists the minimum bases required for publication for various geographic areas.

Estimates for census regions and divisions are shown in section I, data for States are shown in section II, and limited data for metropolitan areas, metropolitan divisions, and cities are shown in section III. Estimates of levels are

not provided in section III, because population controls needed to make estimates of levels comparable with those in the other sections of this publication are not available.

Because the estimates are based on a survey rather than on a complete census of the population, they are subject to sampling error. Consequently, error ranges have been calculated in the form of 90-percent confidence intervals and displayed for the unemployment rates in the first table of sections I, II, and III. In addition, appendix B provides tables from which the sampling error ranges can be obtained for the data in other tables in sections I and II. Separate error tables are not provided for each population group (such as total, White, Black or African American, Asian, and Hispanic or Latino ethnicity). Instead, one table is used for all population groups for a given labor force characteristic, because differences in sampling errors are usually minimal.

Section I. Estimates for Census Regions And Divisions

Table 1. Census regions and divisions: employment status of the civilian noninstitutional population, by sex, age, race, Hispanic or Latino ethnicity, and marital status, 2009 annual averages

(Numbers in thousands)

Married women, spouse present	9,461	5,678	60.0	5,261	55.6	417	7.3	6.8 - 7.8
Women who maintain families	2,127	1,457	68.5	1,289	60.6	168	11.5	10.4 - 12.6

¹ Error ranges are calculated at the 90-percent confidence interval, which means that if repeated samples were drawn from the same population and an error range constructed around each sample estimate, in 9 out of 10 cases the true value based on a census of the population would be contained within these error ranges.

² Error ranges cannot be properly computed when the number of sample cases is very small or the unemployment rate is too low.

NOTE: Data for demographic groups are not shown when the labor force base

does not meet the BLS publication standard of reliability for the area in question, as determined by the sample size. (See appendix B.) Items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated Census 2000-based population controls.

Table 2. Census regions and divisions: employment status of the civilian noninstitutional population 25 years and over, by educational attainment, 2009 annual averages

¹ Employed persons are classified as full- or part-time workers on the basis of their usual weekly hours at all jobs, regardless of the number of hours they are at work during the reference week. Persons absent from work are classified according to their usual status.

² Includes some persons at work 35 hours or more, classified by their reason for working part time.

NOTE: Items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated Census 2000-based population controls.

¹ Less than 0.05 percent.

NOTE: Totals for summary groups published include other occupations not shown separately. Estimates for the race groups shown in the table (White, Black or African

American, and Asian) do not sum to totals because data for other race groups are not shown. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race.

¹ Excludes persons with no previous work experience.

² Data are not shown when the labor force base does not meet the BLS publication standard of reliability for the particular area, as determined by sample size. (See appendix B.)

³ Fewer than 500 persons or less than 0.05 percent.

NOTE: Totals for summary groups published include other industries not shown separately. Items may not compute to displayed rates because of rounding.

¹ Less than 0.05 percent.

NOTE: Totals for summary groups published include other industries not shown separately. Estimates for the race groups shown in the table (White, Black or African

American, and Asian) do not sum to totals because data for other race groups are not shown. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race.

¹ Fewer than 500 persons.

NOTE: Items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose

ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated Census 2000-based population controls.

Table 9. Census regions and divisions: persons at work by sex, age, race, Hispanic or Latino ethnicity, and hours of work, 2009 annual averages

(Numbers in thousands)

Population group and area	Total at work	Hours of work								Average hours	
		1 to 14 hours	15 to 29 hours	30 to 34 hours	35 hours and over					Total at work	Persons who usually work full time
					Total	35 to 39 hours	40 hours	41 to 48 hours	49 hours and over

¹ Includes seasonal work, job started or ended, own illness, childcare problems, other family or personal obligations, labor dispute, in school or training, civic or military duty, and all other reasons.

² Includes seasonal work, health and medical limitations, full-time workweek fewer than 35 hours, and all other reasons.

³ Fewer than 500 persons.

NOTE: Items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated Census 2000-based population controls.

NOTE: Items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition,

persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated Census 2000-based population controls.

¹ Error ranges are calculated at the 90-percent confidence interval, which means that if repeated samples were drawn from the same population and an error range constructed around each sample estimate, in 9 out of 10 cases the true value based on a complete census of the population would be contained within these error ranges.

² Error ranges cannot be properly computed when the number of sample cases is very small or the unemployment rate is too low.

³ Fewer than 500 persons or less than 0.05 percent.

NOTE: Data for demographic groups are not shown when the labor force base

does not meet the BLS publication standard of reliability for the area in question, as determined by the sample size. (See appendix B.) Items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated Census 2000-based population controls.

¹ Employed persons are classified as full- or part-time workers on the basis of their usual weekly hours at all jobs, regardless of the number of hours they are at work during the reference week. Persons absent from work are classified according to their usual status.

² Includes some persons at work 35 hours or more, classified by their reason for working part time.

³ Fewer than 500 persons.

⁴ Data are not shown when the labor force base does not meet the BLS

publication standard of reliability for the particular area, as determined by the sample size. (See appendix B.)

NOTE: Items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated Census 2000-based population controls.

Table 17. States: employment status of the experienced¹ civilian labor force, by occupation, 2009 annual averages

(Numbers in thousands)

¹ Excludes persons with no previous work experience.

² Data are not shown when the labor force base does not meet the BLS publication standard of reliability for the particular area, as determined by the sample size. (See appendix B.)

³ Fewer than 500 persons.

NOTE: Totals for summary groups published include other occupations not shown separately. Items may not compute to displayed rates because of rounding.

Table 18. States: percent distribution of employed persons by occupation, sex, race, and Hispanic or Latino ethnicity, 2009 annual averages

Population group and State	Number (in thousands)	Percent	Management, professional, and related occupations		Service occupations	Sales and office occupations		Natural resources, construction, and maintenance occupations			Production, transportation, and material moving occupations	
			Management, business, and financial operations occupations	Professional and related occupations		Sales and related occupations	Office and administrative support occupations	Farming, fishing, and forestry occupations	Construction and extraction occupations	Installation, maintenance, and repair occupations	Production occupations	Transportation and material moving occupations

¹ Less than 0.05 percent.

NOTE: Totals for summary groups published include other occupations not shown separately. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data for other race

groups are not shown. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race.

¹ Excludes persons with no previous work experience.

² Data are not shown when the labor force base does not meet the BLS publication standard of reliability for the particular area, as determined by the sample size. (See appendix B.)

³ Fewer than 500 persons.

NOTE: Totals for summary groups published include other industries not shown separately. Items may not compute to displayed rates because of rounding.

Table 20. States: percent distribution of employed persons by industry, sex, race, and Hispanic or Latino ethnicity, 2009 annual averages

NOTE: Totals for summary groups published include other industries not shown separately. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do

not sum to totals because data for other race groups are not shown. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race.

¹ Fewer than 500 persons.

NOTE: Items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition,

persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated Census 2000-based population controls.

Table 22. States: persons at work by sex, age, race, Hispanic or Latino ethnicity, and hours of work, 2009 annual averages

(Numbers in thousands)

Population group and State	Total at work	Hours of work								Average hours	
		1 to 14 hours	15 to 29 hours	30 to 34 hours	35 hours and over					Total at work	Persons who usually work full time
					Total	35 to 39 hours	40 hours	41 to 48 hours	49 hours and over

¹ Fewer than 500 persons.

NOTE: Items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In

addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated Census 2000-based population controls.

Table 23. States: persons at work 1 to 34 hours, by sex, race, Hispanic or Latino ethnicity, usual full- or part-time status, and reason for working less than 35 hours, 2009 annual averages

(In thousands)

Population group and State	Usually work full time						Usually work part time							
	Total	Slack work or business conditions	Vacation or personal day	Holiday, legal or religious	Weather-related curtailment	Other reasons ¹	Total	Slack work or business conditions	Could only find part-time work	Child-care problems	Other family or personal obligations	In school or training	Retired or Social Security limit on earnings	Other reasons ²

¹ Includes seasonal work, job started or ended, own illness, childcare problems, other family or personal obligations, labor dispute, in school or training, civic or military duty, and all other reasons.

² Includes seasonal work, health and medical limitations, full-time workweek fewer than 35 hours, and all other reasons.

³ Fewer than 500 persons.

NOTE: Items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated Census 2000-based population controls.

Table 24. States: employed persons with a job but not at work, by sex, race, Hispanic or Latino ethnicity, and reason not at work, 2009 annual averages

(Numbers in thousands)

¹ Includes maternity or paternity leave and other family obligations.

² Includes labor disputes, bad weather, in school or training, civic or military duty, and all other reasons.

³ Fewer than 500 persons.

NOTE: Items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or African American,

and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated Census 2000-based population controls.

Table 25. States: unemployed persons by sex, age, race, Hispanic or Latino ethnicity, and reason for unemployment, 2009 annual averages

(In thousands)

Population group and State	Total unemployed	Job losers and persons who completed temporary jobs		Job leavers	Re-entrants	New entrants

¹ Fewer than 500 persons.

NOTE: Data for demographic groups are not shown when the labor force base does not meet the BLS publication standard of reliability for the area in question, as determined by the sample size. (See appendix B.) Items may not sum to totals because of rounding. Estimates for the race groups shown in the table (White, Black or

African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated Census 2000-based population controls.

Table 26. States: unemployed persons by sex, age, race, Hispanic or Latino ethnicity, and duration of unemployment, 2009 annual averages

¹ Fewer than 500 persons.

NOTE: Data for demographic groups are not shown when the labor force base does not meet the BLS publication standard of reliability for the area in question, as determined by the sample size. (See appendix B.) Items may not sum to totals because of rounding. Estimates for the race groups shown in the table

(White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. In addition, persons whose ethnicity is identified as Hispanic or Latino may be of any race and, therefore, are classified by ethnicity as well as by race. Data incorporate updated Census 2000-based population controls.

Section III. Estimates for Metropolitan Areas, Metropolitan Divisions, and Cities

Labor force, employment, and unemployment levels for the selected metropolitan areas, metropolitan divisions, and cities are not provided in tables 27 through 32, because independent population controls are not available. Only rates, ratios, and percent distributions are published. Unemployment rates shown in table 27 differ from the estimates produced through the LAUS program.

Table 27. Selected metropolitan areas, metropolitan divisions, and cities: civilian labor force participation rates, employment-population ratios, and unemployment rates, by sex, age, race, Hispanic or Latino ethnicity, and marital status, 2009 annual averages

¹ Error ranges are calculated at the 90-percent confidence interval, which means that if repeated samples were drawn from the same population and an error range constructed around each sample estimate, in 9 out of 10 cases the true value based on a census of the population would be contained within these error ranges.

² Error ranges cannot be properly computed when the number

of sample cases is very small or the unemployment rate is too low.

³ Data do not reflect the official U.S. Office of Management and Budget definition. (See appendix C.)

⁴ Less than 0.05 percent.

NOTE: Data are not shown when the labor force base does not meet the BLS publication standard of reliability for the area in question, as determined by the sample size. (See appendix B.)

Table 28. Selected metropolitan areas, metropolitan divisions, and cities: civilian labor force participation rates, employment-population ratios, and unemployment rates for the noninstitutional population 25 years and over, by educational attainment, 2009 annual averages

¹ Excludes persons with no previous work experience. Includes self-employed and unpaid family workers, and mining, which are not shown separately.

² Data are not shown when the labor force base does not meet the BLS publication standard of reliability for the particular area, as determined by

the sample size. (See appendix B.)

³ Data do not reflect the official U.S. Office of Management and Budget definition. (See appendix C.)

⁴ Less than 0.05 percent.

¹ Includes self-employed and unpaid family workers, mining, and agriculture and related industries.

² Data do not reflect the official U.S. Office of Management and Budget definition. (See appendix C.)

³ Less than 0.05 percent.

NOTE: Data for demographic groups are not shown when they do not meet the BLS publication standard of reliability for the area in question, as determined by the sample size. (See appendix B.)

Appendix A.

Concepts and Definitions for Data Derived from the Current Population Survey

Tables showing labor force status include estimates of the civilian noninstitutional population 16 years and older, as well as data on the civilian labor force, labor force participation rates, employment, and unemployment rates. Population estimates are revised by the U.S. Census Bureau each year, and the revised estimates are incorporated into the Current Population Survey (CPS) labor force levels. This adjustment affects the estimates of labor force, employment, and unemployment levels, but it generally does not affect percentages, such as unemployment rates, labor force participation rates, or employment-population ratios. Thus, levels contained in this publication may not be comparable with levels published prior to or after 2009 in *Geographic Profile of Employment and Unemployment*.

Concepts and definitions underlying the labor force data in this bulletin are as follows:

Civilian noninstitutional population. Included are persons 16 years of age and older residing in the 50 States and the District of Columbia who are not inmates of institutions (for example, penal and mental facilities and homes for the aged) and who are not on active duty in the Armed Forces.

Employed persons. These are all persons who, during the reference week, (a) worked for least 1 hour as paid employees, in their own business or profession, or on their own farm, or worked 15 hours or more as unpaid workers in an enterprise operated by a member of the family, or (b) were not working but had jobs or businesses from which they were temporarily absent because of a labor-management dispute, job training, vacation, illness, bad weather, childcare problems, maternity or paternity leave, or other family or personal reasons, whether or not they were paid for the time off or were seeking other jobs.

Unemployed persons. Those in this category are all persons who had no employment during the reference week, were available for work—except for temporary illness—and made specific efforts to find employment some time during the 4-week period ending with the reference week. Persons who were waiting to be recalled to a job from which they had been laid off need not have been looking for work to be classified as unemployed.

Duration of unemployment. This represents the length of time (through the current reference week) that persons classified as unemployed had been looking for work. For persons who were laid off, duration of unemployment represents the number of full weeks they had been on layoff.

Reason for unemployment. Unemployment is categorized according to the status of individuals at the time they began to look for work. People are divided into five major groups on the basis of their reason for unemployment: (1) *job losers*, comprising (a) persons on *temporary layoff*, who have been given a date to return to work or who expect to return within 6 months (persons on layoff need not be looking for work to qualify as unemployed), and (b) *permanent job losers*, whose employment ended involuntarily and who began looking for work; (2) *job leavers*, who quit or otherwise terminated their employment voluntarily and immediately began looking for work; (3) *persons who completed temporary jobs* (included along with job losers in this publication), who began looking for work after their temporary jobs ended; (4) *re-entrants*, who previously worked but were out of the labor force prior to beginning their job search; and (5) *new entrants*, who have never worked.

Labor force. This group comprises all persons classified as employed or unemployed in accordance with the criteria described earlier.

Unemployment rate. The unemployment rate represents the number of unemployed persons as a percent of the labor force.

Participation rate. This represents the proportion of the civilian noninstitutional population that is in the labor force.

Employment-population ratio. This represents the proportion of the civilian noninstitutional population that is employed.

Married, spouse present; and family. “Married, spouse present,” applies to husband and wife if both were living in the same household, even if one is temporarily absent

on business, on vacation, on a visit, in a hospital, etc. A family is defined as a group of two or more persons residing together who are related by birth, marriage, or adoption; all such persons are considered as members of one family. Families are classified either as married-couple families or as families maintained by women or men without spouses. A family maintained by a woman or a man is defined as one in which the householder is either single, widowed, divorced, or married with the spouse absent.

Occupation and industry. This information regarding the employed applies to the job held in the reference week. Persons with two or more jobs are classified in the job at which they work the greatest number of hours. The unemployed are classified according to their last job. The occupation and industry classification of CPS data is based on the coding systems used in Census 2000.

Class of worker. The class-of-worker breakdown assigns workers to the following categories: private and government wage and salary workers, self-employed workers, and unpaid family workers. Wage and salary workers receive wages, salary, commissions, tips, or pay in kind from a private employer or from a government unit. Self-employed persons are those who work for profit or fees in their own business, profession, trade, or farm. Only the unincorporated self-employed are included in the self-employed category in the class-of-worker typology. Self-employed persons who respond that their businesses are incorporated are included among wage and salary workers because, technically, they are paid employees of a corporation. Unpaid family workers are persons working without pay for 15 hours a week or more on a farm or in a business operated by a member of the household to whom they are related by birth or marriage.

Hours of work. These statistics relate to the actual number of hours worked during the reference week. For example, persons who normally work 40 hours a week but were off on the Columbus Day holiday would be reported as working 32 hours, even though they were paid for the holiday. For persons working in more than one job, the figures relate to the number of hours worked in all jobs during the week; all the hours are credited to the major job.

At work part time for economic reasons. Sometimes referred to as “involuntary part time,” this category refers to individuals who give an economic reason for working 1 to 34 hours during the reference week. Economic reasons include unfavorable business conditions, inability to find full-time work, and seasonal declines in demand. Those who usually work part time must indicate that they want and are available to work full time in order to be classified as part time for economic reasons.

At work part time for noneconomic reasons. This group includes those persons who usually work part time and were at work 1 to 34 hours during the reference week for a noneconomic reason. Some examples of noneconomic reasons are the following: illness or other medical limitations, childcare problems or other family or personal obligations, school or training, retirement or Social Security limits on earnings, and being in a job in which full-time work is less than 35 hours. The group also includes those who give an economic reason for usually working 1 to 34 hours but say they do not want to work full time or are unavailable for such work.

Usual full- or part-time status. Data on persons “at work” exclude persons who were temporarily absent from a job and are therefore classified into the zero-hours-worked category, “with a job but not at work.” These are persons who were absent from their jobs for the entire reference week for such reasons as bad weather, childcare problems, maternity or paternity leave, vacation, illness, or involvement in a labor dispute. In order to differentiate a person's normal schedule from his or her activity during the reference week, persons also are classified according to their usual full- or part-time status. In this context, *full-time workers* are those who usually work 35 hours or more (at all jobs combined). This group will include some individuals who worked less than 35 hours in the reference week for either economic or noneconomic reasons and those who are temporarily absent from work. Similarly, *part-time workers* are those who usually work less than 35 hours per week (at all jobs), regardless of the number of hours worked in the reference week. This may include some individuals who actually worked at least 35 hours in the reference week, as well as those who were temporarily absent from work.

White, Black or African American, Asian, and other. These are terms used to describe the race of persons. Included in the “other” group are persons classified as American Indian and Alaska Native (AIAN), as Native Hawaiian and other Pacific Islander (NHPI), as some other race (SOR), and within two or more race categories. Because of the relatively small sample size in most areas, data for “other” races are not published at this time. In the enumeration process, race is determined by the household respondent.

Hispanic or Latino ethnicity. This refers to persons who identified themselves in the survey enumeration process as Mexican, Puerto Rican, Cuban, Central or South American, or of other Hispanic or Latino ethnicity or descent. Persons of Hispanic or Latino ethnicity may be of any race; thus, they are included in the White, Black or African American, and Asian population groups.

Appendix B. Sampling and Estimation Procedures and Sampling Error Tables

The estimates presented in this bulletin are based on annual averages of monthly data obtained from the Current Population Survey (CPS), a sample survey of the civilian noninstitutional population. The survey, conducted each month by the U.S. Census Bureau for the U.S. Bureau of Labor Statistics, provides comprehensive data on the labor force, including such characteristics as age, sex, race, Hispanic or Latino ethnicity, marital status, occupation, and industry. The survey also provides data on the characteristics of those not in the labor force.

Each month, trained interviewers collect information from a scientifically selected sample of about 60,000 eligible households. This sample, designed to represent the civilian noninstitutional population, includes about 10,000 households beyond the 50,000 in the regular CPS sample in order to meet the requirements of the State Children's Health Insurance Program (SCHIP) legislation. The SCHIP legislation required the Census Bureau to improve State estimates of the number of children who live in low-income families and lack health insurance. These estimates are obtained from the Annual Demographic Supplement to the CPS. In September 2000, the Census Bureau began expanding the monthly CPS sample in 31 States and the District of Columbia because of the SCHIP legislation.

Selected respondents in the 60,000 eligible households are interviewed to obtain information about the employment status of each household member 16 years of age and over. The information that is collected pertains to a "reference week," usually the calendar week (Sunday to Saturday) that includes the 12th of the month, with actual interviewing occurring during the week following the reference week—known as the "survey week."

Sampling procedures

The 2009 sample encompasses 824 sample areas, with coverage of every State and the District of Columbia. It is based, to a large extent, on information about the distribution of the population as reported in the Census 2000 enumeration. (A redesigned Census 2000-based sample was phased in from April 2004 through July 2005.) The 824 areas were selected by dividing the entire area of the United States into 2,025 primary sampling units (PSUs). With some minor exceptions, a PSU consists of a county or a number of contiguous counties. Most metropolitan areas constitute separate PSUs.

To improve the efficiency of the sample, the 2,025 PSUs are grouped into strata within each State. Those PSUs which are in a stratum by themselves are called "self-representing" and are generally the most populous in each State. Other strata are formed by combining PSUs that are similar in such characteristics as population growth, proportion of Blacks and Hispanics, and distributions by occupation and industry and by age and sex. PSUs selected from these strata are "non-self-representing," because each one chosen represents the entire stratum. One PSU is selected from each stratum, with the probability of selection proportionate to the relative population size of the PSU.

In States with a SCHIP sample, the self-representing PSUs are the same for both the regular CPS and SCHIP. In most States, the same non-self-representing sample PSUs are in the sample for both the regular CPS and SCHIP; however, to improve the reliability of the SCHIP estimates in Maine, Maryland, and Nevada, the SCHIP non-self-representing PSUs are selected independent of the regular CPS sample PSUs, with replacement. The method for stratification of PSUs for SCHIP in these States is similar to that of the other stratifications, except that the stratification variable used is the number of people under age 18 with household income below twice the poverty level.

Within each of the selected PSUs, the number of households to be enumerated each month is determined in two steps. First, a sample of the unit's census enumeration districts (EDs) is selected through the use of the population size probability selection procedure. EDs are administrative units and contain, on average, about 300 households. Second, clusters of approximately four addresses (contiguous wherever possible) are selected to be enumerated within each designated ED.

Part of the sample is changed, or rotated, each month. A given rotation group is in the sample for 4 consecutive months, leaves the sample during the following 8 months, and then returns for another 4 consecutive months. A primary reason for rotating the sample is to minimize the lack of cooperation that may result from interviewing a constant panel indefinitely. The rotation plan provides for three-fourths of the sample to be identical from one month to the next and one-half to be identical with that from the same month a year earlier.

Estimating methods

Under the estimating methods used in the CPS, all of the results for a given month become available simultaneously and are based on returns from the entire sample of respondents. The estimation procedure involves weighting the data from each respondent by the inverse of the probability of the person being in the sample. This gives a rough measure of the number of actual persons that each sample person represents. Through a series of estimation steps (outlined below), the selection probabilities are adjusted for noninterviews and survey undercoverage; data from previous months are incorporated into the estimates through the composite estimation procedure.

1. *Noninterview adjustment.* The weights for all interviewed households are adjusted to the extent needed to account for occupied sample households for which no information was obtained because of absence, impassable roads, refusals, or unavailability of the respondents for other reasons. This noninterview adjustment is made separately for clusters of similar sample areas that are usually, but not necessarily, contained within a State. Similarity of sample areas is based on metropolitan area status and size. Within each cluster, there is a further breakdown by residence. The proportion of sample households not interviewed averages about 7 to 8 percent, depending upon a number of factors, including weather and vacations.

2. *Ratio estimates.* The distribution of the population selected for the sample may differ somewhat, by chance, from that of the population as a whole in such characteristics as age, race, sex, and State of residence. Because these characteristics are closely correlated with labor force participation and other principal measurements made from the sample, the survey estimates can be substantially improved when weighted appropriately by the known distribution of the population characteristics. This is accomplished through four stages of adjustment, as follows:

a. *First-stage ratio adjustment.* The purpose of the first-stage ratio adjustment is to reduce the contribution to the variance of the sample State-level estimates arising from the sampling of PSUs. (There would still be variance associated with the State-level estimates even if the survey included all households in every sample PSU.) This kind of variance is called between-PSU variance. For some States, the between-PSU variance makes up a relatively large proportion of the total variance, whereas the relative contribution of the between-PSU variance at the national level is generally quite small. There are several factors to be considered in determining what information to use in applying the first-stage adjustment. The information must be available for each PSU, be correlated with as many of the relevant statistics from the CPS as possible, and be reasonably stable over time so that the gain from the ratio

adjustment procedure does not deteriorate. The basic labor force categories (unemployed, nonagricultural employed, etc.) could be used; however, this information probably would fail the stability criterion. The distribution of the population by race (Black alone and non-Black alone) by age groups 0–15 and 16+ satisfies all three criteria, including stability.

The use of the Black alone and non-Black alone categories compensates for the fact that the racial composition of a non-self-representing (NSR) sample PSU could differ substantially from the racial composition of the stratum it is representing. This adjustment is not necessary for self-representing (SR) PSUs, since they represent only themselves. Adjustment factors are computed for the two race categories for each State containing NSR PSUs. The Black alone and non-Black alone cells are collapsed within a State when a cell meets one of four sample criteria.¹ As a result of these criteria, the first-stage ratio adjustment actually is used (i.e., does not collapse to 1.0) in less than half of the States.

b. *National coverage adjustment.* A national coverage adjustment was added to the CPS weighting process beginning in 2003. The purpose of the national coverage adjustment is to correct for interactions between race and ethnicity that are not addressed in the second-stage weighting (see item “d” on the next page). Research has shown that the undercoverage of certain race-ethnicity combinations (e.g., non-Black Hispanic) cannot be corrected with second-stage adjustment alone. The national coverage adjustment also helps to speed the convergence of the second-stage adjustment, resulting in fewer iterations required to reach the final national controls. The national coverage adjustment factors are based on independently derived estimates of the population. Person records are grouped into four pairs on the basis of their month-in-sample (MIS). MISs 1 and 5, 2 and 6, 3 and 7, and 4 and 8 form the four pairs. Each MIS pair is then adjusted to age/sex/race/ethnicity population controls: between 2 and 28 age cells are used, depending on which of the six major coverage groups (Black alone non-Hispanic, White alone non-Hispanic, White alone Hispanic, non-White alone Hispanic, Asian alone non-Hispanic, or residual race non-Hispanic) is being adjusted.

c. *State coverage adjustment.* In addition to a national coverage adjustment, a State coverage adjustment also was added to the CPS weighting process beginning in 2003. The purpose of the State coverage adjustment is to

¹ The four sampling criteria are the following: (1) that the adjustment factor be greater than 1.3; (2) that the adjustment factor be less than 1/1.3 (or 0.769230 in decimal form); (3) that there be fewer than four NSR sample PSUs in the State; and (4) that there be fewer than 10 expected interviews in an age/race cell in the State.

adjust for State differences in sex/age/race coverage. Research has shown that estimates of characteristics of certain race groups (e.g., Blacks) can differ greatly from the controls if a State coverage adjustment is not used. However, unlike the national coverage adjustment, the State coverage adjustment slows the convergence of the second-stage ratio adjustment process. The State coverage adjustment is based on independently derived estimates of the population. Except for the District of Columbia, person records for non-Black alone are grouped into four pairs based on month-in-sample (MIS)—with the same MIS pairings (1 and 5, 2 and 6, 3 and 7, and 4 and 8) used as in the national coverage adjustment. Person records for Black alone for all States and non-Black alone for the District of Columbia are formed at the State level, with all months in the sample combined. For the Black alone component of the adjustment, States are adjusted by use of a varying number of age/sex/race cells based on the expected number of sample records in each age/sex cell. For example, for non-Black alone, all States except the District of Columbia are adjusted for three age groupings (0–15, 16–44, and 45+) by sex. Each cell is adjusted to independent age/sex/race population controls in each State.

d. *Second-stage ratio adjustment.* The second-stage ratio adjustment is performed to decrease the variance of the vast majority of the CPS sample estimates. Because the labor force status of individuals in the general population is correlated with their specific geographic and demographic identification (e.g., teenagers and unemployment, or rural married women and labor force participation), the variance of the labor force estimates can be reduced by controlling the CPS sample estimates to independent estimates of selected geographic and demographic population categories. The procedure also is believed to reduce the bias due to coverage errors. The procedure adjusts the weights for the sample to estimates within each month-in-sample pair to control the sample estimates for a number of geographic and demographic subgroups of the population in order to ensure that these sample-based estimates of the population match independent population controls for each of the categories. These independent population controls are updated each month. Three sets of controls are used: (1) the civilian noninstitutional population for the 50 States and the District of Columbia by sex and age (0–15, 16–44, and 45+); (2) the national civilian noninstitutional population for 36 Hispanic and 36 non-Hispanic age-sex categories; and (3) the total national civilian noninstitutional population for 56 White, 36 Black, and 26 residual race/age/sex categories.

The adjustment is done separately for each month-in-sample pair (1 and 5, 2 and 6, 3 and 7, and 4 and 8). Because adjusting the weights to match one set of controls can cause differences in other controls, an iterative process is used to simultaneously control all variables. Successive iterations begin with the weights as adjusted by all

previous iterations. A total of 10 iterations are performed, which results in (virtual) consistency between the sample estimates and the population controls.

The independent population controls used for the CPS are produced by the Census Bureau's Population Division. The CPS population controls are based on a demographic framework of population accounting. Under this framework, time series of population estimates and projections are anchored by the latest decennial census enumerations, with populations for dates since the latest decennial census derived from the estimation, or projection, of population change. In the simplest terms, estimates of population change are derived by adjusting the resident population as enumerated in the latest decennial census for births, deaths, and net migration, using information from a variety of data sources. Estimates of the resident population are adjusted to represent the civilian noninstitutional population 16 years of age and over (the eligible CPS population) by subtracting estimates of the number of residents under 16 years of age, the number of residents in the Armed Forces, and the number of residents who are institutionalized.

3. *Composite estimation procedure.* The last step in the preparation of most CPS estimates makes use of a composite estimation procedure. The composite estimate consists of a weighted average of two factors: (1) the second-stage ratio estimate based on the entire sample from the current month and (2) the composite estimate for the previous month, plus an estimate of the month-to-month change based on the six rotation groups common to both months. In addition, a bias adjustment term is added to the weighted average to account for relative bias associated with month-in-sample estimates. The compositing procedure results in a further reduction in sampling error—that is, a reduction beyond that which is achieved after the two stages of ratio adjustment.

Effective with the release of January 1998 data, BLS implemented a new composite estimation method for the CPS. The new technique provides increased operational simplicity for microdata users and allows optimization of compositing coefficients for different labor force categories. Under the new procedure, weights are derived for each record. These weights, when aggregated, produce estimates consistent with those produced by the composite estimator. Under the previous procedure, composite estimation was performed at the macro level. The composite estimator for each tabulated cell was a function of the aggregated weights for respondents contributing to the cell in question in current and prior months. The different months of data were combined by use of compositing coefficients. Thus, microdata users needed several months of data to compute composite estimates. To ensure consistency, the same coefficients had to be used for all estimates. The values of the

coefficients selected were much closer to optimal for unemployment values than for employment or labor force values.

The new composite weighting method involves two steps: (1) the computation of composite estimates for the main labor force categories, classified by important demographic characteristics, and (2) the adjustment of the microdata weights, through a series of ratio adjustments, to agree with these composite estimates, thus incorporating the effect of composite estimation into the microdata weights. Under this procedure, the sum of the composite weights of all sample persons in a particular labor force category equals the composite estimate of the level for that category. Thus, to produce a composite estimate for a particular month, a data user needs simply to access the microdata file for that (single) month and compute a weighted sum. The new composite weighting approach also improves the accuracy of labor force estimates by using different compositing coefficients for different labor force categories. The weighting adjustment method assures additivity while allowing variation in compositing coefficients.

Reliability of the estimates

The estimates in this bulletin are based upon a sample of the population rather than a complete count. Therefore, they may *differ* from the figures that would have been obtained if it had been possible to take a complete census using the same questionnaire and procedures as are used in the CPS. There are two types of errors in an estimate based on a sample survey—sampling and nonsampling. Tables B-2 through B-5 (in this appendix) indicate the magnitude of the sampling error. They also partially measure the effect of some nonsampling errors in response and enumeration but do not measure any systematic biases in the data.

Sampling variability. The standard error is primarily a measure of sampling variability, that is, the variation that occurs by chance because a sample rather than the entire population is surveyed. The sample estimate and its standard error enable one to construct confidence intervals, that is, ranges which would include the average result of all possible samples with a known probability. For example, if all possible samples were selected, each of these samples were surveyed under essentially the same conditions by use of the same sample design, and an estimate and its estimated standard error were calculated from each sample, then the following would occur:

1. Approximately 68 percent of the intervals from 1 standard error below the estimate to 1 standard error above the estimate would include the average result of all possible samples.
2. Approximately 90 percent of the intervals from 1.645 standard errors below the estimate

to 1.645 standard errors above the estimate would include the average result of all possible samples.

3. Approximately 95 percent of the intervals from 2 standard errors below the estimate to 2 standard errors above the estimate would include the average result of all possible samples.

The error of a sample estimate varies inversely with the size of the sample and directly with the size of the estimate. Hence, an estimate for a subgroup constituting a small proportion of a population will tend to have a larger error relative to its size than will an estimate for a larger subgroup.

Reliability standards

The CPS sample design takes into consideration both national and State reliability. For the State data, a minimum reliability standard is set: an expected maximum coefficient of variation (CV) on the level of total unemployment of 8 percent annually. This is calculated with the assumption of a 6-percent unemployment rate. Because each State's sample design must meet the reliability standard, the CPS sampling rate differs by State. (The sampling rate is the proportion of all households that are selected for the sample.) Generally, the smaller the State population, the higher is the sampling rate. The average State sampling rates range roughly from 1 in every 200 households to 1 in every 2,500 households in each stratum within the State.

Publication standards for State and area CPS data

To achieve comparability of the data for regions, divisions, States, metropolitan areas, and cities for publication purposes, a unique requirement for minimum levels for the labor force and for employment and unemployment was developed for each area. This requirement is based on the known differences in sampling rates among these areas. Before estimates are published for a specific category (such as Hispanic unemployment in a particular State), a predetermined "critical cell" must meet a 50-percent CV requirement. As a result of this requirement, minimum bases for publication have been developed for each area. Table B-1 lists the minimum necessary base for publication of data in each of the regions, divisions, States, in the District of Columbia, and in each of the metropolitan areas and cities appearing in this bulletin.

Estimates are not shown when they do not meet the minimum base for the State or area listed in table B-1. In tables showing the labor force status of the population, that is, the number of employed and unemployed, publishability is determined by whether the labor force level exceeds the minimum base for unemployment in table B-1. If the labor force level is less than the unemployment minimum base, all data—labor force,

employment, unemployment, and unemployment—are suppressed. In all other tables, the determining factor is whether the size of the base of the distribution exceeds the minimum base for employment or unemployment separately, depending on whether the table presents a distribution of employment or unemployment for the area or population subgroup. For example, in the table showing percent distribution of unemployed persons by reason for unemployment, the entire line of data will be suppressed if the total unemployment is less than the minimum base for unemployment. If a subgroup appears in the table (such as a given sex or race), the subgroup also will be suppressed if the total for the reason in question does not meet the minimum base. Data are not published for any cell with a level of fewer than 500 persons or less than 0.05 percent of the total for a given characteristic.

Using the sampling error tables

Tables B-2 through B-5 provide sampling errors for use in constructing 90-percent confidence intervals (approximately 1.645 standard errors) for major labor force characteristics. The sampling errors provided are approximations and thus indicate the order of magnitude of the sampling error rather than the precise amount of the possible error in an estimate. Illustrations on the use of these tables are provided next. In all cases, the computations present the estimated levels in thousands of persons.

Sampling error of an estimated number. Table B-5 shows that an estimate of 50,000 unemployed persons in North Carolina will have an absolute sampling error of 10,000, or a relative sampling error of 20 percent (10,000/50,000). In comparison, an estimate of 100,000 unemployed persons in North Carolina has an absolute sampling error of 14,000, yielding a relative sampling error of 14 percent (14,000/100,000). A statement that unemployment for a particular group in North Carolina is between 40,000 and 60,000 in the first instance, and between 86,000 and 114,000 in the second, can be made with approximately 90-percent confidence.

This statement can be interpreted as follows: if one were to draw all possible samples, make an estimate from each sample (using the same methods and techniques), and construct an interval around each estimate (with the sampling errors shown in the tables), then 90 percent of the intervals would contain the average value of all possible samples.

To convert a sampling error from 90-percent confidence, as displayed in the tables, to 68-percent confidence (1 standard error), multiply the sampling error shown in the tables by 0.63. To convert the sampling error from 90-percent to 95-percent confidence (approximately 2 standard errors), multiply the sampling error by 1.23. For the example given above, the sampling error at 90-percent confidence is 10,000. At 68-percent confidence, the error would be about 6,300 (10,000 × 0.63). At 95-percent

confidence, the error would be about 12,300 (10,000 × 1.23).

Sampling error of a difference. To compute the error of a difference from the tables, an additional step is required. If, for instance, one wishes to know whether a change in the unemployment rate from one year to the next in a particular area for a particular population group is statistically significant, or whether the difference in the unemployment rate between two areas or population groups is statistically meaningful, the significance of the difference needs to be computed. (Differences between estimates for 2 consecutive years may be influenced to some extent by a redesign of the CPS concepts, questionnaire, and collection procedures, such as the one that occurred in 1994.)

As noted above, differences can take two general forms: (1) differences between population groups and/or geographic areas, or (2) differences for the same population group and geographic area over time. Either type of difference can be calculated with the following formula, noting the limiting covariance assumption discussed later:

$$SE_d = [(SE_1^2 + SE_2^2) - 2C(SE_1 \times SE_2)]^{1/2},$$

where

SE_d = the sampling error of the difference,

SE_1 = the sampling error of one group or year,

SE_2 = the sampling error of another group or year,

and

C = the covariance (or relationship) term.

The values of SE_1 and SE_2 can be found in the appropriate table of *Geographic Profile* for each year if the comparison is between different years, because the size of the samples and, consequently, sampling errors may differ from year to year. Values for the covariance, or “ C ” term, for employment and unemployment for differences between *consecutive* years are as follows: for labor force or employment levels, $C = 0.58$; for unemployment levels or rates, $C = 0.37$. It is important to note that these C terms are usable only for calculating the sampling error of a difference for over-the-year change for the *same geographic area and population group*.

Covariance terms for the relationship between different population groups or geographic areas in this bulletin are not available. When calculating sampling errors for differences between two *different* population groups or geographic areas, a C term of zero must be assumed. The effect of this assumption is that (1) if the relationship between two groups, areas, or years (differences for nonconsecutive years) is small, the C term can legitimately be ignored and the sampling errors will not be adversely affected, and (2) if there is a strong positive relationship between the two groups, areas, or years (differences for consecutive years), then the error

computed without a *C* term will be overstated. An overstatement could lead one to erroneously state that a difference or change was *not* statistically significant when, in fact, it was. When there is a strong relationship over time for a characteristic such as employment (people tend to remain employed from one year to the next), the importance of using a *C* term when calculating the sampling error of a difference over time increases greatly.

The next example illustrates how to calculate a sampling error of a difference. Suppose one wished to know whether a *hypothetical* difference between the unemployment level of 250,000 for a particular population group in California and an unemployment level of 200,000 for the same group in New York was statistically significant at 90-percent confidence. Table B-5 gives the error for an unemployment level of 250,000 in California as approximately 21,000 and the error for an unemployment level of 200,000 in New York as 19,000. Using the formula described previously without the *C* term produces the following results:

$$\begin{aligned} SE_1 &= 21; SE_2 = 19 \\ SE_1^2 + SE_2^2 &= 802 \\ SE_d &= (SE_1^2 + SE_2^2)^{1/2} = 28 \end{aligned}$$

Because each State's sample is independent, there is no measurable correlation between the two estimates, and a *C* term of zero can be assumed. Thus, the error of the difference is approximately 28,000. Because the actual difference (50,000) is greater than the error of the difference, it can be stated, with 90-percent confidence, that the difference in the unemployment level is attributable to factors other than sampling variability alone.

Sampling errors for unemployment rates. Unemployment rates and error ranges for these rates are provided in tables 1, 14, and 27. This information can be used to derive a sampling error for an unemployment rate if one is needed. The error range is a 90-percent confidence interval around the unemployment rate. By subtracting the estimated unemployment rate from the upper bound of the range (or subtracting the lower bound of the range from the estimated unemployment rate), the sampling error for the rate can be obtained. This sampling error can then be used in the formula given previously for computing the sampling error of a difference, or for any other purpose the user chooses.

Interpolation and extrapolation. Although sampling errors are listed for selected levels of employment and unemployment in tables B-2 through B-5, users may wish to know the sampling error for an estimate whose value is not listed. To derive such a sampling error, it is necessary to use interpolation or extrapolation.

For example, in order to derive the sampling error for the 2009 total unemployment level for women in Ohio, it is necessary to use interpolation because table B-5 contains no sampling error for an unemployment level estimate of 175,000. The following formula and accompanying example show how to interpolate for this estimate:

$$\begin{aligned} SE &= \{[(A - G) / (F - G)] \times (X - Y)\} + Y \\ \text{where} \\ SE &= \text{the sampling error for the estimated value,} \\ A &= \text{the estimated value (175,000),} \\ F &= \text{the table value (200,000) immediately above} \\ &\quad \text{the estimated value,} \\ G &= \text{the table value (100,000) immediately below} \\ &\quad \text{the estimated value,} \\ X &= \text{the sampling error of } F \text{ (20,000),} \\ Y &= \text{the sampling error of } G \text{ (14,000), and} \\ SE &= \{[(175 - 100) / (200 - 100)] \times (20 - 14)\} + 14 \\ &= (0.75 \times 6) + 14 \\ &= 4.5 + 14 \\ &\approx 19 \end{aligned}$$

If the sample-based estimate lies outside the boundaries of the error tables, extrapolation can be used to approximate the sampling error. The formula for extrapolation is the same as that for interpolation; however, the “*F*” term becomes the highest value in the table and the “*G*” term becomes the next-highest value.

Derivation of sampling errors

The State and area sampling errors are developed with a generalized regression procedure and are *not* based on sample data for each individual area, population group, or labor force characteristic. As with all sampling error tables produced for CPS State and area data, a number of approximations are required in order to derive sampling errors that apply to a wide variety of items. As a result, these sampling errors indicate the order of magnitude of the error rather than a precise error for any specific item. The sampling error tables are derived from standard error equations and special parameters developed by the Bureau of Labor Statistics. These parameters are available upon request from the Division of Local Area Unemployment Statistics, Room 4675, 2 Massachusetts Avenue NE, Washington, DC 20212-0001. Telephone: (202) 691-6392.

Tables B-2 through B-5 can be used for estimates pertaining to any race or ethnic group whose data are published. As noted, the sampling errors are based on a generalized regression procedure and are approximate. Generally, the degree of precision in these tables is slightly greater for Whites (and the total of all race and ethnic groups) than it is for Blacks or Hispanics.

Appendix C. Geographic Boundary Definitions

Table C-1 of this appendix lists the States composing the census regions and divisions for which data are published in section I. Tables C-2 and C-3 provide the geographic boundary definitions of the metropolitan areas and metropolitan divisions, respectively, for which data are published in section III. The information for metropolitan areas and metropolitan divisions reflects the standards and definitions established by the U.S. Office of Management and Budget (OMB) on June 6, 2003.¹

Effective December 22, 1987, the boundary of the St. Louis metropolitan area was redefined to include the part of Sullivan city in Crawford County, Missouri. This change is not reflected in the data for St. Louis shown in this bulletin, although the addition of entire counties in 2003 is reflected.

Metropolitan areas and metropolitan divisions

The general concept of a metropolitan area is that of a core area containing a large population nucleus, together with adjacent communities that have a high degree of economic and social integration with that core.

¹ The standards were published in the *Federal Register* on December 27, 2000. The definitions and a complete listing of the areas were first published on June 6, 2003, in OMB Bulletin No. 03-04. Area titles appearing in this bulletin reflect updates per OMB Bulletin No. 09-01, *Update of Statistical Area Definitions and Guidance on Their Uses*, dated November 20, 2008.

A *Metropolitan Statistical Area* consists of at least one urbanized area that has a population of at least 50,000. The Metropolitan Statistical Area comprises the central county or counties containing the urbanized area core, plus adjacent outlying counties having a high degree of social and economic integration with the central county or counties, as measured through commuting ties.

A *Metropolitan Division* is essentially a separately identifiable employment center within a very large Metropolitan Statistical Area (one with a core population of 2.5 million or more). The Metropolitan Division consists of one or more main or secondary counties that represent an employment center, plus adjacent counties associated with the main or secondary county or counties through the strongest commuting ties.

The data published in section III reflect New England City and Town Area (NECTA) definitions, rather than the county-based Metropolitan Statistical Area and Metropolitan Division definitions, in the six New England States. In previous decades, the statistical areas that OMB defined for the New England States were city and town based, with county-based areas specified as an alternative for users seeking a comparable geographic basis. For the current definitions, all Metropolitan Statistical Areas and Metropolitan Divisions are county-based, with NECTAs serving as an equivalent alternative for the New England States.

Table C-1. State composition of the census regions and divisions

Region and division	State
Northeast:	
New England	Connecticut Maine Massachusetts New Hampshire Rhode Island Vermont
Middle Atlantic	New Jersey New York Pennsylvania
Midwest:	
East North Central	Illinois Indiana Michigan Ohio Wisconsin
West North Central	Iowa Kansas Minnesota Missouri Nebraska North Dakota South Dakota
South:	
South Atlantic	Delaware District of Columbia Florida Georgia Maryland North Carolina South Carolina Virginia West Virginia
East South Central	Alabama Kentucky Mississippi Tennessee
West South Central ...	Arkansas Louisiana Oklahoma Texas
West:	
Mountain	Arizona Colorado Idaho Montana Nevada New Mexico Utah Wyoming
Pacific	Alaska California Hawaii Oregon Washington

Table C-2. Geographic boundaries of metropolitan areas

State and area	Definition
Alabama	
Birmingham-Hoover	Bibb, Blount, Chilton, Jefferson, St. Clair, Shelby, and Walker Counties
Arizona	
Phoenix-Mesa-Scottsdale	Maricopa and Pinal Counties
California	
Los Angeles-Long Beach-Santa Ana	Los Angeles and Orange Counties
Riverside-San Bernardino-Ontario	Riverside and San Bernardino Counties
Sacramento--Arden-Arcade--Roseville	El Dorado, Placer, Sacramento, and Yolo Counties
San Diego-Carlsbad-San Marcos	San Diego County
San Francisco-Oakland-Fremont	Alameda, Contra Costa, Marin, San Francisco, and San Mateo Counties
San Jose-Sunnyvale-Santa Clara	San Benito and Santa Clara Counties
Colorado	
Denver-Aurora-Broomfield	Adams, Arapahoe, Broomfield, Clear Creek, Denver, Douglas, Elbert, Gilpin, Jefferson, and Park Counties
Connecticut	
Bridgeport-Stamford-Norwalk	Bridgeport, Norwalk, Shelton, and Stamford cities, and Darien, Easton, Fairfield, Greenwich, Monroe, New Canaan, Newtown, Redding, Ridgefield, Stratford, Trumbull, Weston, Westport, and Wilton towns in Fairfield County; Ansonia, Derby, and Milford cities, and Oxford, Seymour, Southbury, and Woodbridge towns in New Haven County
Hartford-West Hartford-East Hartford	Bristol, Hartford, and New Britain cities, and Avon, Berlin, Bloomfield, Burlington, Canton, East Granby, East Hartford, Farmington, Glastonbury, Granby, Hartland, Manchester, Marlborough, Newington, Plainville, Rocky Hill, Simsbury, Southington, South Windsor, West Hartford, Wethersfield, and Windsor towns in Hartford County; Barkhamsted, Harwinton, New Hartford, Plymouth, and Thomaston towns in Litchfield County; Middletown city, and Cromwell, East Haddam, East Hampton, Haddam, Middlefield, and Portland towns in Middlesex County; Colchester and Lebanon towns in New London County; Andover, Bolton, Columbia, Coventry, Ellington, Hebron, Mansfield, Stafford, Tolland, Union, Vernon, and Willington towns in Tolland County; Ashford town in Windham County
District of Columbia	
Washington-Arlington-Alexandria	District of Columbia; Alexandria, Fairfax, Falls Church, Fredericksburg, Manassas, and Manassas Park cities, and Arlington, Clarke, Fairfax, Fauquier, Loudoun, Prince William, Spotsylvania, Stafford, and Warren Counties, Va.; Calvert, Charles, Frederick, Montgomery, and Prince George's Counties, Md.; Jefferson County, W.Va.
Florida	
Jacksonville	Baker, Clay, Duval, Nassau, and St. Johns Counties
Miami-Fort Lauderdale-Pompano Beach	Broward, Miami-Dade, and Palm Beach Counties
Orlando-Kissimmee	Lake, Orange, Osceola, and Seminole Counties
Tampa-St. Petersburg-Clearwater	Hernando, Hillsborough, Pasco, and Pinellas Counties
Georgia	
Atlanta-Sandy Springs-Marietta	Barrow, Bartow, Butts, Carroll, Cherokee, Clayton, Cobb, Coweta, Dawson, DeKalb, Douglas, Fayette, Forsyth, Fulton, Gwinnett, Haralson, Heard, Henry, Jasper, Lamar, Meriwether, Newton, Paulding, Pickens, Pike, Rockdale, Spalding, and Walton Counties
Hawaii	
Honolulu	Honolulu County
Illinois	
Chicago-Naperville-Joliet	Cook, DeKalb, DuPage, Grundy, Kane, Kendall, Lake, McHenry, and Will Counties, Ill.; Jasper, Lake, Newton, and Porter Counties, Ind.; Kenosha County, Wis.

Table C-2. Geographic boundaries of metropolitan areas—Continued

State and area	Definition
Indiana	
Indianapolis-Carmel	Boone, Brown, Hamilton, Hancock, Hendricks, Johnson, Marion, Morgan, Putnam, and Shelby Counties
Kentucky	
Louisville-Jefferson County	Bullitt, Henry, Jefferson, Meade, Nelson, Oldham, Shelby, Spencer, and Trimble Counties, Ky.; Clark, Floyd, Harrison, and Washington Counties, Ind.
Louisiana	
New Orleans-Metairie-Kenner	Jefferson, Orleans, Plaquemines, St. Bernard, St. Charles, St. John the Baptist, and St. Tammany Parishes
Maryland	
Baltimore-Towson	Baltimore city, and Anne Arundel, Baltimore, Carroll, Harford, Howard, and Queen Anne's Counties
Massachusetts	
Boston-Cambridge-Quincy	Taunton city, and Berkley, Dighton, Easton, Mansfield, Norton, and Raynham towns in Bristol County; Beverly, Gloucester, Haverhill, Lawrence, Lynn, Methuen, Newburyport, Peabody, and Salem cities, and Amesbury, Andover, Boxford, Danvers, Essex, Georgetown, Groveland, Hamilton, Ipswich, Lynnfield, Manchester-by-the-Sea, Marblehead, Merrimac, Middleton, Nahant, Newbury, North Andover, Rockport, Rowley, Salisbury, Saugus, Swampscott, Topsfield, Wenham, and West Newbury towns in Essex County; Cambridge, Everett, Lowell, Malden, Marlborough, Medford, Melrose, Newton, Somerville, Waltham, Watertown, and Woburn cities, and Acton, Arlington, Ashland, Ayer, Bedford, Belmont, Billerica, Boxborough, Burlington, Carlisle, Chelmsford, Concord, Dracut, Dunstable, Framingham, Groton, Holliston, Hopkinton, Hudson, Lexington, Lincoln, Littleton, Maynard, Natick, North Reading, Pepperell, Reading, Sherborn, Shirley, Stoneham, Stow, Sudbury, Tewksbury, Townsend, Tyngsborough, Wakefield, Wayland, Westford, Weston, Wilmington, and Winchester towns in Middlesex County; Franklin and Quincy cities, and Avon, Braintree, Brookline, Canton, Cohasset, Dedham, Dover, Foxborough, Holbrook, Medfield, Medway, Millis, Milton, Needham, Norfolk, Norwood, Randolph, Sharon, Stoughton, Walpole, Wellesley, Westwood, Weymouth, and Wrentham towns in Norfolk County; Brockton city, and Abington, Bridgewater, Carver, Duxbury, East Bridgewater, Halifax, Hanover, Hanson, Hingham, Hull, Kingston, Lakeville, Marshfield, Middleborough, Norwell, Pembroke, Plymouth, Plympton, Rockland, Scituate, West Bridgewater, and Whitman towns in Plymouth County; Boston, Chelsea, and Revere cities, and Winthrop town in Suffolk County; Berlin, Bolton, Harvard, Hopedale, Mendon, Milford, Southborough, and Upton towns in Worcester County, Mass.; Nashua city, and Amherst, Brookline, Greenfield, Greenville, Hollis, Hudson, Litchfield, Lyndeborough, Mason, Merrimack, Milford, Mont Vernon, Pelham, and Wilton towns in Hillsborough County; Atkinson, Brentwood, Chester, Danville, Derry, East Kingston, Epping, Exeter, Fremont, Hampstead, Hampton Falls, Kensington, Kingston, Londonderry, Newfields, Newton, Plaistow, Raymond, Salem, Sandown, Seabrook, South Hampton, and Windham towns in Rockingham County, N.H.
Michigan	
Detroit-Warren-Livonia	Lapeer, Livingston, Macomb, Oakland, St. Clair, and Wayne Counties
Minnesota	
Minneapolis-St. Paul-Bloomington	Anoka, Carver, Chisago, Dakota, Hennepin, Isanti, Ramsey, Scott, Sherburne, Washington, and Wright Counties, Minn.; Pierce and St. Croix Counties, Wis.

Table C-2. Geographic boundaries of metropolitan areas—Continued

State and area	Definition
Missouri	
Kansas City	Bates, Caldwell, Cass, Clay, Clinton, Jackson, Lafayette, Platte, and Ray Counties, Mo.; Franklin, Johnson, Leavenworth, Linn, Miami, and Wyandotte Counties, Kan.
St. Louis ¹	St. Louis city, and Franklin, Jefferson, Lincoln, St. Charles, St. Louis, Warren, and Washington Counties, Mo.; Bond, Calhoun, Clinton, Jersey, Macoupin, Madison, Monroe, and St. Clair Counties, Ill.
Nevada	
Las Vegas-Paradise	Clark County
New York	
Buffalo-Niagara Falls	Erie and Niagara Counties
New York-Northern New Jersey-Long Island	Bronx, Kings, Nassau, New York, Putnam, Queens, Richmond, Rockland, Suffolk, and Westchester Counties, N.Y.; Bergen, Essex, Hudson, Hunterdon, Middlesex, Monmouth, Morris, Ocean, Passaic, Somerset, Sussex, and Union Counties, N.J.; Pike County, Pa.
Rochester	Livingston, Monroe, Ontario, Orleans, and Wayne Counties
North Carolina	
Charlotte-Gastonia-Concord	Anson, Cabarrus, Gaston, Mecklenburg, and Union Counties, N.C.; York County, S.C.
Ohio	
Cincinnati-Middletown	Brown, Butler, Clermont, Hamilton, and Warren Counties, Ohio; Boone, Bracken, Campbell, Gallatin, Grant, Kenton, and Pendleton Counties, Ky.; Dearborn, Franklin, and Ohio Counties, Ind.
Cleveland-Elyria-Mentor	Cuyahoga, Geauga, Lake, Lorain, Medina Counties
Columbus	Delaware, Fairfield, Franklin, Licking, Madison, Morrow, Pickaway, and Union Counties
Dayton	Greene, Miami, Montgomery, and Preble Counties
Oklahoma	
Oklahoma City	Canadian, Cleveland, Grady, Lincoln, Logan, McClain, and Oklahoma Counties
Tulsa	Creek, Okmulgee, Osage, Pawnee, Rogers, Tulsa, and Wagoner Counties
Oregon	
Portland-Vancouver-Beaverton	Clackamas, Columbia, Multnomah, Washington, and Yamhill Counties, Ore.; Clark and Skamania Counties, Wash.
Pennsylvania	
Philadelphia-Camden-Wilmington	Bucks, Chester, Delaware, Montgomery, and Philadelphia Counties, Pa.; Burlington, Camden, Gloucester, and Salem Counties, N.J.; New Castle County, Del.; Cecil County, Md.
Pittsburgh	Allegheny, Armstrong, Beaver, Butler, Fayette, Washington, and Westmoreland Counties
Rhode Island	
Providence-Fall River-Warwick	Barrington, Bristol, and Warren towns in Bristol County; Warwick city, and Coventry, East Greenwich, West Greenwich, and West Warwick towns in Kent County; Newport city, and Jamestown, Little Compton, Middletown, Portsmouth, and Tiverton towns in Newport County; Central Falls, Cranston, East Providence, Pawtucket, Providence, and Woonsocket cities, and Burrillville, Cumberland, Foster, Glocester, Johnston, Lincoln, North Providence, North Smithfield, Scituate, and Smithfield town in Providence County; Charlestown, Exeter, Hopkinton, Narragansett, North Kingstown, Richmond, and South Kingstown in Washington County, R.I.; Attleboro and Fall River cities, and North Attleborough, Rehoboth, Seekonk, Somerset, Swansea, and Westport towns in Bristol County; Bellingham and Plainville towns in Norfolk County; Blackstone and Millville towns in Worcester County, Mass.

¹ This is not the official definition of the St. Louis area. Excluded is the part of Sullivan city in Crawford County, Mo.
