TRANSMISSION OF MATERIAL IN THIS RELEASE IS EMBARGOED UNTIL 8:30 A.M. (EDT),
FRIDAY, APRIL 29, 2005

## EMPLOYMENT COST INDEX—MARCH 2005

Total compensation costs for civilian workers increased 0.7 percent from December 2004 to March 2005, seasonally adjusted, virtually unchanged from the 0.8 percent gain from September to December 2004, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. Benefit costs rose 1.2 percent, outpacing the gain for wages and salaries of 0.6 percent. The Employment Cost Index (ECI), a component of the National Compensation Survey, measures quarterly changes in compensation costs, which include wages, salaries, and employer costs for employee benefits for civilian workers (nonfarm private and State and local government).

Rises in benefit costs accounted for nearly 60 percent of the increase in compensation costs for civilian workers from December 2004 to March 2005. Among private industry workers, benefit costs contributed approximately 60 percent of compensation gains during the quarter, with health insurance costs and nonproduction bonuses accounting for nearly one-third of the gain in compensation costs. Among State and local government workers, benefit costs comprised a little over half of compensation cost gains during the December to March period, with health insurance costs accounting for one-fourth of the gain in compensation costs.

## Quarterly changes, seasonally adjusted

Compensation costs for the private sector rose 0.6 percent from December 2004 to March 2005, after advancing 0.8 percent in the prior quarter. For State and local government workers, compensation costs rose 1.0 percent in March, compared with a gain of 0.9 percent for the quarter ended in December. (See tables A and 1.)

Benefit costs advanced 1.2 percent for civilian workers in the March 2005 quarter, following a gain of 1.6 percent in the December 2004 quarter. Private sector benefit costs rose 1.1 percent for the March quarter, moderating from the 1.6 percent gain in the previous quarter. Benefit costs for State and local government workers increased 1.5 percent in the March quarter, unchanged from the prior quarter.

## NOTE

This release incorporates new seasonal adjustment factors. See page 4 for details.

Wages and salaries for civilian workers increased 0.6 percent during the March 2005 quarter, virtually unchanged from a gain of 0.5 percent in December 2004. Wages and salaries for private industry workers rose 0.6 percent for the March quarter, compared with a 0.4 percent gain during the prior period. Wages and salaries in State and local government advanced 0.8 percent during the December 2004 to March 2005 period, following an increase of 0.6 percent change in the previous quarter.

Table A. 3-month percent changes in Employment Cost Index, seasonally adjusted
$\left.\begin{array}{lllllllll}\hline \text { Compensation Component } & \begin{array}{c}\text { June }\end{array} & \begin{array}{c}\text { Sep. }\end{array} & \begin{array}{c}\text { Dec. } \\ 2003\end{array} & \begin{array}{c}\text { Mar. } \\ 2003\end{array} & \begin{array}{c}\text { June } \\ 2003\end{array} & \begin{array}{c}\text { Sep. }\end{array} & \begin{array}{c}\text { Dec. }\end{array} & \text { Mar. } \\ \text { 2004 }\end{array}\right)$

Over-the-year changes, not seasonally adjusted
Annual compensation costs for civilian workers increased 3.5 percent for the year ended March 2005, compared with a 3.8 percent over-the-year increase for March 2004. Compensation costs in private industry rose 3.4 percent in the year ended March 2005, compared with a 3.9 percent increase in March 2004. Compensation costs increased 3.6 percent for State and local governments for the year ended March 2005, compared with an over-the-year gain of 3.3 percent in March 2004. (See tables B, 2, and 3.)

The components of compensation showed differences in the rate of change. While increases in wages and salaries continued at a moderate pace, benefit costs continued to rise more rapidly. For civilian workers, wages and salaries rose 2.4 percent in the year ended March 2005, nearly identical with a gain of 2.5 percent in March 2004. Wages and salaries for private industry workers also rose 2.4 percent for the 12 months ended in March 2005, compared with an increase of 2.6 percent in March 2004. Benefit costs gained 5.9 percent for civilian workers for the period ended March 2005, compared with an increase of 6.9 percent for the year ended March 2004. (See tables B, 5, 6, and 8.)

## Nonfarm private industry

For the year ended March 2005, compensation costs in private industry increased 3.9 percent for goodsproducing industries, compared with an advance of 4.5 percent for the year ended March 2004. Compensation costs for manufacturing advanced 3.8 percent in March 2005, compared with the 4.7 percent gain in March 2004. Compensation costs for construction rose 2.7 percent in March 2005, compared with a 3.5 percent rise in March 2004. (See table 3.)

The over-the-year increase in compensation for service-producing industries was 3.2 percent, compared with a 3.6 percent gain for the year ended March 2004. Among service-producing industries, compensation costs rose modestly for retail trade and transportation and public utilities, increasing 2.5 percent and 2.8 percent, respectively, in March 2005. (See table 3.)

Over-the-year compensation cost increases were 3.6 percent for white-collar occupations, 3.2 percent for blue-collar occupations, and 2.4 percent for service occupations for the year ended March 2005. Among white-collar occupational groups, compensation cost changes ranged from 2.3 percent for sales workers to 4.3 percent for professional specialty and technical employees. Among blue-collar occupational groups, compensation cost increases ranged from 2.7 percent for machine operators, assemblers, and inspectors to 3.6 percent for precision production, craft, and repair occupations. (See table 3.)

Compensation costs for union workers advanced 3.6 percent over the year ended March 2005, compared with a 3.4 percent increase for nonunion workers. Among blue-collar workers, compensation costs advanced 3.5 percent for union workers, compared with the gain of 3.1 percent for nonunion workers. In manufacturing industries, compensation cost gains for union workers slowed sharply, rising 3.2 percent for year ended March 2005, significantly less than the 7.8 percent increase for the year-ended March 2004. For nonunion workers in manufacturing, compensation costs rose 3.4 percent for the year ended March 2005, compared with an overthe year gain of 3.6 percent in March 2004. (See tables C and 4.)

Wages and salaries for union workers rose 2.3 percent for the 12 months ended in March 2005, compared with an over-the-year increase of 2.4 percent for nonunion workers. Benefit costs for union workers rose 5.6 percent for the year ended March 2005, slowing sharply compared with the gain of 11.2 percent in March 2004. Benefit costs for nonunion workers advanced 5.8 percent over the year ended March 2005, compared with an increase of 6.0 percent in March 2004. (See tables C, 7, and 8.)

Table C. 12-month percent changes in Employment Cost Index, private industry workers, not seasonally adjusted

| Mar. | Mar. | Mar. | Mar. | Mar. | Mar. |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Compensation Component | 2000 | 2001 | 2002 | 2003 | 2004 | 2005 |
| $\quad$ Union workers |  |  |  |  |  |  |
| Compensation costs | 3.6 | 3.4 | 4.7 | 4.7 | 5.7 | 3.6 |
| Wages and salaries | 2.7 | 3.6 | 4.4 | 3.3 | 2.5 | 2.3 |
| Benefit costs | 5.4 | 3.1 | 5.0 | 7.3 | 11.2 | 5.6 |
| $\quad$ Nonunion workers |  |  |  |  |  |  |
| Compensation costs | 4.7 | 4.3 | 3.8 | 3.6 | 3.6 | 3.4 |
| Wages and salaries | 5.4 | 3.9 | 3.4 | 2.9 | 2.6 | 2.4 |
| Benefit costs | 5.5 | 4.8 | 5.8 | 6.0 | 5.8 |  |

Among the four geographic regions, increases in compensation costs ranged from 3.0 percent in the Midwest to 3.7 percent in the South for the year ended March 2005. Compensation costs rose 3.5 percent in the Northeast and West. In the West, gains in wages and salaries slowed to 2.1 percent for the year ended March 2005, significantly less than the 3.4 percent gain for the year ended March 2004. Among the remaining regions, wages and salaries rose 2.2 percent in the Midwest, 2.5 percent in the Northeast, and 2.8 percent in the South for the year ended March 2005. (See tables 4 and 7.)

## State and local government

Wages and salaries for State and local government workers rose 2.3 percent in the year ended March 2005, compared with the gain of 2.1 percent for March 2004. Benefit costs rose 6.6 percent for the year ended March 2005, compared with the gain of 6.2 percent for the year ended March 2004. (See tables B, 5, and 8.)

For the year ended March 2005, compensation costs increased 3.1 percent for educational services, compared with the 2.9 percent increase for the year ended March 2004. Within educational services, compensation increases were 3.3 percent for elementary and secondary schools and 2.6 percent for colleges and universities. Among occupational groups, compensation costs of service workers rose 4.3 percent for the year ended March 2005, compared with gains of 3.5 percent for white- and blue-collar workers. (See table 2.)

## NOTE:

This release incorporates annual revisions in seasonally adjusted Employment Cost Index (ECI) data for total compensation, wages and salaries, and benefit costs. Seasonally adjusted data for 2000-2004 were revised to reflect updated seasonal factors. The new seasonal factors and the historical listing containing revised seasonally adjusted indexes are available on the Internet site http://www.bls.gov/ncs/ect/home.htm, by e-mail request at ocltinfo@bls.gov, or by telephone (202) 691-6199.

The ECI for June 2005 is scheduled to be released Friday, July 29, 2005, at 8:30 a.m. (EDT).
ECI data are available on the Compensation Cost Trends page at http://www.bls.gov/ncs/ect/home.htm. To access data using Anonymous FTP, use the Internet address ftp://ftp.bls.gov.

For technical assistance in using the BLS Internet site, send e-mail to webmaster@bls.gov. For ECI data requests, send e-mail to ocltinfo@bls.gov.

The ECI news release is available through an e-mail subscription service. See the subscription link on http://www.bls.gov/ncs/ect/home.htm or http://www.bls.gov/bls/newsrels.htm.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service Number: 1-800-877-8339.

## EXPLANATORY NOTE

The Employment Cost Index (ECI) is a measure of the change in the cost of labor, free from the influence of employment shifts among occupations and industries. The compensation series includes changes in wages and salaries and employer costs for employee benefits. The wage and salary series and the benefit cost series provide the change for the two components of compensation.

Wages and salaries are defined as the hourly straight-time wage rate or, for workers not paid on an hourly basis, straight-time earnings divided by the corresponding hours. Straight-time wage and salary rates are total earnings before payroll deductions, excluding premium pay for overtime and for work on weekends and holidays, shift differentials, and nonproduction bonuses such as lump-sum payments provided in lieu of wage increases. Production bonuses, incentive earnings, commission payments, and cost-of-living adjustments are included in straight-time wage and salary rates.

Benefits covered by the ECI are: Paid leave-vacations, holidays, sick leave, and other leave; supplemental pay-premium pay for work in addition to the regular work schedule (such as overtime, weekends, and holidays), shift differentials, and nonproduction bonuses (such as referral bonuses and lumpsum payments provided in lieu of wage increases); insurance benefits-life, health, short-term disability, and long-term disability; retirement and savings benefits-defined benefit and defined contribution plans; legally required benefits-Social Security, Medicare, Federal and State unemployment insurance, and workers' compensation; and other benefits-severance pay and supplemental unemployment plans.

The ECI provides data for the civilian economy, which includes the total private nonfarm economy excluding households and the public sector excluding the Federal government. The private industry series and the State and local government series provide data for the two sectors separately.

Data for this quarter were collected from a probability sample of approximately 42,000 occupational observations within about 9,600 sample establishments in private industry and approximately 3,500 occupations within about 800 sample establishments in State and local governments. Data are collected for the pay period including the $12^{\text {th }}$ day of the survey months of March, June, September, and December.

The sampled establishments are classified by industry categories based on the 1987 Standard Industrial Classification (SIC), as defined by the U.S. Office of Management and Budget. Details on the sample design are included in the bulletin, Employment Cost Indexes, 1975-99, (Bulletin 2532). Within an establishment, specific job categories are selected and classified into about 500 occupational classifications according to the 1990 Census of Population. Individual occupations are combined into broader occupational groups. Fixed employment weights are used each quarter to calculate the most aggregate series-civilian, private, and State and local government. These fixed weights are also used to derive all of the industry and occupation series indexes. Since March 1995, 1990 employment counts, primarily from the Bureau's Occupational Employment Statistics survey, have been used. For more information on these topics, see the articles, "Introducing New Weights for the Employment Cost Index," in the June 1985 issue of the Monthly Labor Review and "Introducing 1990 Weights for the Employment Cost Index" in the June 1995 issue of Compensation and Working Conditions.

For the series based on bargaining status, region, and area size, employment data are not available. The employment weights are reallocated within these series each quarter based on the current ECI sample. The indexes for these series, consequently, are not strictly comparable to those for the aggregate, industry, and occupation series. A fuller explanation of the calculation of index numbers appears in an article, "Estimation Procedures for the Employment Cost Index," in the May 1982 issue of the Monthly Labor Review. Beginning with the March 1990 ECI release, indexes were rebased to June 1989=100. A description of the rebasing is included in the article "Employment Cost Index Rebased to June 1989," in the April 1990 issue of the Monthly Labor Review.

Beginning with the December 1990 ECI release, seasonally adjusted data are available for selected ECI series. Seasonal adjustment removes the effects of events that follow a more or less regular pattern each year. These adjustments make nonseasonal patterns easier to identify. For more information on the methodology used to seasonally adjust ECI series, see the bulletin, Employment Cost Indexes, 1975-99, (Bulletin 2532). The seasonal adjustment factors are recalculated once a year. The March release contains data reflecting the newly updated seasonal adjustment factors. The historical data for the last five years are then revised based on
the newly estimated factors. The seasonal factors for 2005 and revised seasonally adjusted indexes for the past five years are available on the Internet site (http://www.bls.gov/ncs/ect/home.htm) or upon request.

The ECI sample is rotated over approximately five years, which makes the sample more representative of the economy and reduces respondent burden. The sample is replaced on a cross-area, cross-industry basis.

Because the ECI is a sample survey, it is subject to sampling errors. Sampling errors are differences that occur between the results computed from a sample of observations and those computed from all observations in the population. The estimates derived from different samples selected using the same sample design may differ from one other. A measure of the variation among these differing estimates is the standard error. It can be used to measure the precision with which an estimate from a particular sample approximates the expected result of all possible samples. The chances are about 68 out of 100 that an estimate from the survey differs from a complete population figure by less than the standard error. The chances are about 90 out of 100 that this difference would be less than 1.6 times the standard error. The statements of comparisons appearing in this publication are significant at a 1.6 standard error level or better, unless otherwise indicated. This means that for differences cited, the estimated difference is greater than 1.6 times the standard error of the difference.

Because standard errors vary from quarter to quarter, the ECI uses a five-year moving average of standard errors to evaluate published series. To assist users in ascertaining the reliability of series, the fiveyear moving average of standard errors for all estimates (excluding seasonally adjusted series) will be available on the Internet site (http://www.bls.gov/ncs/ect/home.htm) shortly after publication of the news release.

When determining data to be used in contract negotiations, it is important to note that differences by bargaining status may be due to factors other than union status, such as occupational and industry mix. For example, union occupations tend to be concentrated in blue-collar occupations within manufacturing industries. Thus, differences between blue-collar and white-collar pay or differences in manufacturing versus nonmanufacturing industries could explain such differences. An important consideration when choosing a series for escalation is the number of workers covered. Series with smaller numbers of workers may have larger sampling errors or be dominated by a smaller number of employers. For more information, see the web site: (http://www.bls.gov/ect/escalator.htm).

More detailed information on the ECI is available from several sources. These include an historical bulletin-Employment Cost Indexes, 1975-99, (Bulletin 2532), a chapter, "National Compensation Measures," in the BLS Handbook of Methods (Bulletin 2490), and several articles published in the Monthly Labor Review and Compensation and Working Conditions. Orders for bulletins should be made to the Bureau of Labor Statistics, Publication Sales Center, Room 960, 230 South Dearborn Street, Chicago, IL 60604, (312) 3531880. Reprints of the articles and other descriptive pieces are available upon request by calling (202) 6916199 or sending e-mail to (ocltinfo@bls.gov).

Historical data series are available, beginning with some wage and salary series begun in 1975. In addition, constant-dollar ECI series derived from the Consumer Price Index for All Urban Consumers (CPI-U) are available. Supplemental data from the ECI, providing 12-month percent changes in employer costs for health insurance in private industry beginning with June 1982 are also available. This information is available at the Internet site (http://www.bls.gov/ect/home.htm) or upon request.

The costs per hour worked of compensation components, based on data from the ECI, were recently published in a separate news release titled "Employer Costs for Employee Compensation-December 2004." Beginning with the March 2004 estimates, industry estimates are based on the 2002 North American Industry Classification (NAICS) system and the occupational categories are classified according to the 2000 Standard Occupational (SOC) system. These systems replace the 1987 Standard Industrial Classification System (SIC) and the Occupational Classification System (OCS). The release and information on the transition to the new industry and occupational classification systems are available by e-mail request at ocltinfo@bls.gov, on the Internet site http://www.bls.gov/ect/home.htm, or by telephone (202) 691-6199. Historical data and related articles are included in the bulletin, Employer Costs for Employee Compensation, 1986-99, (Bulletin 2526). Also available on the Internet site (http://www.bls.gov/ncs/ect/home.htm) or upon request is an annual historical summary from March 1986 through March 2002. Data on a quarterly basis beginning with June 2002 are also available. The cost levels are calculated with current employment weights, rather than the fixed 1990 weights used in computing the ECI. Therefore, year-to-year changes in the cost levels usually differ from those in the ECI.

[^0]:    1 Includes wages, salaries, and employer costs for employee benefits.
    2 Includes mining, construction, and manufacturing.
    3 Includes transportation, communication, and public utilities; wholesale and retail trade; finance, insurance, and real estate; and service industries.

[^1]:    4 Seasonality was found for this series; however, the series is not seasonally adjusted due to processing limitations.

    5 No identifiable seasonality was found for this series.

[^2]:    1 Includes wages, salaries, and employer costs for employee benefits.
    2 Includes mining, construction, and manufacturing.
    3 Includes transportation, communication, and public utilities; wholesale and retail trade; finance, insurance, and real estate; service
