EMPLOYMENT CHARACTERISTICS OF FAMILIES — 2017

In 2017, 5.8 percent of families included an unemployed person, down from 6.5 percent in 2016, the U.S. Bureau of Labor Statistics reported today. Of the nation's 82.0 million families, 80.5 percent had at least one employed member in 2017.

These data on employment, unemployment, and family relationships are collected as part of the Current Population Survey (CPS), a monthly survey of about 60,000 households. Data in this release are annual averages. Families are classified either as married-couple families or as families maintained by women or men without spouses present. Unless otherwise noted, families include those with and without children under age 18. For further information, see the Technical Note in this news release.

Families and Unemployment

The number of families with at least one member unemployed decreased by 557,000 to 4.7 million in 2017. The proportion of families with an unemployed person declined by 0.7 percentage point to 5.8 percent. In 2017, this proportion was down for White (5.2 percent), Black (9.5 percent), and Hispanic (7.7 percent) families and was little changed for Asian families (5.4 percent). Black and Hispanic families remained more likely to have an unemployed member in 2017 than White or Asian families. (See table 1.)

Just over two-thirds (or 69.1 percent) of families with an unemployed member also had at least one family member who was employed in 2017. The proportion of families with an unemployed member that had at least one family member working full time grew to 60.5 percent in 2017. Black families with an unemployed member remained less likely to also have an employed family member (58.1 percent) than White (71.3 percent), Asian (84.0 percent), and Hispanic families (71.9 percent). (See table 1.)

In 2017, 4.6 percent of married-couple families had an unemployed member, less than the corresponding percentages of families maintained by women or families maintained by men (9.0 percent and 8.6 percent, respectively). Among families with an unemployed family member, those maintained by women were less likely to also have an employed family member (49.8 percent) than families maintained by men and married-couple families (59.4 percent and 80.7 percent, respectively). (See tables 2 and 3.)

Families and Employment

In 2017, 80.5 percent of families had at least one employed family member, little different from the prior year. Over the year, the likelihood of having an employed family member was about unchanged among White (80.1 percent), Asian (88.6 percent), and Hispanic families (86.9 percent). The percentage of Black families having at least one family member employed increased by 0.9 percentage point to 78.7 percent in 2017, with a large increase in the share of Black families that had a family member employed full time. (See table 1.)

In 2017, families maintained by women remained less likely to have an employed member (76.8 percent) than families maintained by men (84.6 percent) or married-couple families (81.0 percent). Among married-couple families, both the husband and wife were employed in 48.3 percent of families; in 19.1 percent of married-couple families only the husband was employed, and in 7.1 percent only the wife was employed. (See table 2.)

Families with Children

In 2017, 33.6 million families included children under age 18, about 41.0 percent of all families. (Children are sons, daughters, step-children, or adopted children living in the household who are under 18 years old. Not included are nieces, nephews, grandchildren, other related and unrelated children, and children not living in the household.) At least one parent was employed in 90.2 percent of families with children, an increase of 0.5 percentage point from the previous year. Among married-couple families with children, 96.9 percent had at least one employed parent, and 61.9 percent had both parents employed. Among families with children, 84.7 percent of fathers were employed in those maintained by fathers, a greater share than the 73.2 percent of mothers who were employed in families maintained by mothers. (See table 4.)

Parents

The labor force participation rate—the percent of the population working or looking for work—for all women with children under age 18 was 71.1 percent in 2017, up 0.6 percentage point from the prior year. Married mothers remained less likely to participate in the labor force, at 68.6 percent, than mothers with other marital statuses, at 76.5 percent. (Other marital status includes persons who are never married; widowed; divorced; separated; and married, spouse absent; as well as persons in same-sex marriages.) The unemployment rate for married mothers was also considerably lower than for mothers with other marital statuses—2.8 percent, compared with 7.3 percent. (See table 5.)

Mothers with young children are less likely to be in the labor force than those with older children. In 2017, the labor force participation rate of mothers with children under 6 years old, at 65.1 percent, was lower than the rate of those whose youngest child was 6 to 17 years old, at 75.7 percent. Among mothers with children under 3 years old, the participation rate of married mothers was lower than the rate of mothers with other marital statuses—60.0 percent versus 67.5 percent. The unemployment rate of mothers who were married and had children under 3 years old, at 2.6 percent, was substantially lower than the rate for their counterparts with other marital statuses, at 9.9 percent. (See tables 5 and 6.)

In 2017, 92.8 percent of all fathers with children under age 18 participated in the labor force. The participation rate for married fathers, at 93.5 percent, continued to be higher than the rate of fathers with other marital statuses (88.1 percent). Married fathers also continued to have a lower unemployment rate (2.3 percent) than fathers with other marital statuses (5.8 percent). The jobless rate of fathers with other

marital statuses declined by 1.2 percentage points from the previous year, and the jobless rate of married fathers decreased by 0.3 percentage point. (See table 5.)

Employed fathers remained more likely to work full time than employed mothers in 2017; 95.7 percent of employed fathers worked full time, compared with 77.2 percent of employed mothers. Among employed mothers, those with older children were somewhat more likely to work full time than those with younger children. In 2017, 79.0 percent of employed mothers with children 6 to 17 years old worked full time, compared with 74.5 percent of mothers with children under 6 years old. Employed fathers with younger and older children were about equally likely to work full time. (See tables 5 and 6.)

Technical Note

The estimates in this release are based on annual average data from the Current Population Survey (CPS). The CPS, which is conducted by the U.S. Census Bureau for the Bureau of Labor Statistics (BLS), is a monthly survey of about 60,000 eligible households that provides information on the labor force status, demographics, and other characteristics of the nation's civilian noninstitutional population age 16 and over.

The data presented in this release are not strictly comparable with data for earlier years due to the introduction of updated population estimates, or controls, used in the CPS. The population controls are updated each year in January to reflect the latest information about population change. Additional information is available from the BLS website at www.bls.gov/cps/documentation.htm#pop.

Upon request, the information in this release will be made available to individuals who are sensory impaired: Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.

Reliability of the estimates

Statistics based on the CPS are subject to both sampling and nonsampling error. When a sample, rather than the entire population, is surveyed, there is a chance that the sample estimates may differ from the true population values they represent. The exact difference, or *sampling error*, varies depending on the particular sample selected, and this variability is measured by the standard error of the estimate. There is about a 90-percent chance, or level of confidence, that an estimate based on a sample will differ by no more than 1.6 standard errors from the true population value because of sampling error. BLS analyses are generally conducted at the 90-percent level of confidence.

The CPS data also are affected by *nonsampling error*. Nonsampling error can occur for many reasons, including the failure to sample a segment of the population, inability to obtain information for all respondents in the sample, inability or unwillingness of respondents to provide correct information, and errors made in the collection or processing of the data.

Information about the reliability of data from the CPS and guidance on estimating standard errors is available at

www.bls.gov/cps/documentation.htm#reliability.

Definitions

Definitions of the principal terms used in this release are described briefly below.

Householder. The householder is the family

reference person. This is the person (or one of the persons) in whose name the housing unit is owned or rented. The relationship of other individuals in the household is defined in terms of their relationship to the householder. The race or ethnicity of the family is determined by that of the householder.

Family. A family is a group of two or more persons residing together who are related by birth, marriage, or adoption; all such individuals are considered members of one family. The count of families is for "primary" families only. A primary family consists of a householder and all other persons related to and residing with the householder. Sub-families are excluded from the count of families. A sub-family is a family that does not maintain their own household, such as a married couple living in the home of a friend and their family. In this example, the report would include only one family (the householder's or primary family), not two.

Families include those with and without children under 18 years. Families are further categorized as follows:

- Married-couple families refer to opposite-sex married couples residing together and any of their family members residing in the household.
- Families maintained by women or men are made up of householders residing with one or more family members, but not an opposite-sex spouse. The household may or may not include a samesex spouse or an unmarried domestic partner of either sex.

This release presents data for two marital status categories, defined below. Marital status is based on a person's status at the time of the survey.

Married, spouse present. Married, spouse present, includes persons in opposite-sex marriages living together in the same household, even though one may be temporarily absent on business, on vacation, on a visit, in a hospital, or for other reasons.

Other marital status. Other marital status includes persons who are never married; widowed; divorced; separated; and married, spouse absent; as well as persons in same-sex marriages. Separated includes persons with legal separations, those living apart with intentions of obtaining a divorce, and other persons permanently or temporarily separated because of marital discord. Married, spouse absent, includes opposite-sex married persons living apart because either the husband or wife was employed and living at a considerable distance from home, was serving away from home in the Armed Forces, had moved to another area, or had a different place of residence for any other reason except separation as defined above.

Children. Data on children refer to own children under age 18 that live in the household. Included are sons, daughters, step-children, and adopted children of the husband, wife, or person maintaining the family. Not included are nieces, nephews, grandchildren, other related children, and all unrelated children living in the household.

Employed. Employed persons are all those who, during the survey reference week, (a) did any work at all as paid employees; (b) worked in their own business, profession, or on their own farm; or (c) worked 15 hours or more as unpaid workers in an enterprise operated by a member of the family. Persons who were temporarily absent from their jobs because of illness, vacation, labor disputes, or another reason also are counted as employed.

Full-time workers. Workers who usually work 35 hours or more per week at all jobs.

Part-time workers. Workers who usually work fewer than 35 hours per week at all jobs.

Unemployed. The unemployed are persons who had no employment during the reference week, were available for work at that time, and had made specific efforts to find employment sometime during the 4-week period ending with the reference week. Persons who were waiting to be recalled to a job from which they had been laid off need not be looking for work to be classified as unemployed.

Civilian labor force. The civilian labor force comprises all persons classified as employed or unemployed.

Labor force participation rate. The labor force participation rate is the labor force as a percent of the population.

Employment-population ratio. The employment-population ratio is the employed as a percent of the population.

Unemployment rate. The unemployment rate is the number unemployed as a percent of the civilian labor force.

¹ Usually work 35 hours or more per week at all jobs.

NOTE: The race or ethnicity of the family is determined by that of the householder, the family reference person in whose name the housing unit is owned or rented. Estimates for the above race groups (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. Persons whose ethnicity is identified as Hispanic or Latino may be of any race. Updated population controls are introduced annually with the release of January data.
