The 2006 total of 5,840 work-related fatalities represented a two percent increase from the total of 5,734 fatal work injuries reported for 2005.

NOTE: Data from 2001 exclude fatalities resulting from the September 11 terrorist attacks.
The rate of fatal work injuries in 2006 was 4.0 fatalities per 100,000 workers, which was consistent with the rate of 4 of the last 5 years.

Rate = (Fatal work injuries/Employment) x 100,000. Employment data, except for military, based on the Current Population Survey (CPS). Prior to 1999, resident military figure derived from Bureau of the Census data. From 1999 to the present, figure based on Department of Defense (DOD) figures.

NOTE: Data from 2001 exclude fatalities resulting from the September 11 terrorist attacks. Rates for 1992-2006 calculated using revised fatality data.

Number of fatal work injuries, by State, 2006

Twenty-one States and the District of Columbia had fewer fatal workplace injuries in 2006 compared to 2005. The remaining 29 States had a higher number of fatal injuries in 2006 than in 2005.

More work-related fatalities resulted from transportation incidents than from any other event. Highway incidents alone accounted for nearly one out of every four fatal work injuries in 2006.

NOTE: Percentages may not add to totals because of rounding.
Fatal work injuries resulting from transportation incidents, contact with objects and equipment, and assaults and violent acts all decreased in 2006. Fatal work injuries resulting from fires and explosions, exposure to harmful substances and environments, and falls increased in 2006 from 2005 levels.

Four most frequent work-related fatal events, 1992–2006

Workplace homicides have declined 50 percent since 1994, while fatal falls have trended higher. Struck by object fatalities overtook homicides as the third most frequent fatal event in 2004.

NOTE: Data from 2001 exclude fatalities resulting from the September 11 terrorist attacks.
Of the 827 fatal falls in 2006, nearly two in five involved falls from roofs or ladders.

NOTE: Percentages may not add to totals because of rounding.
Men continued to record a disproportionate share of fatalities relative to their employment in 2006.

Fatal injury events, by gender of worker, 2006

A higher percentage of fatal work injuries to women resulted from highway incidents and homicides than for men. A higher percentage of fatal work injuries to men resulted from falls and from contact with objects and equipment.

Number of fatal work injuries involving Hispanic or Latino workers, 1992-2006

Fatal work injuries involving Hispanic or Latino workers increased to a series high in 2006. More than two-thirds of fatally-injured Hispanic or Latino workers in 2006 were born outside of the United States.

NOTE: Data from 2001 exclude fatalities resulting from the September 11 terrorist attacks.
The countries of origin of workers killed on the job in 2006 encompassed approximately 100 foreign countries. More than two in five foreign-born workers who were fatally injured in 2006 were born in Mexico. Of the countries included in the “Other” category, each had less than two percent of total fatalities to foreign-born workers.
Fatal work injury rates, by age group, 2006

Fatal work injury rates for workers 45 years of age and over were higher than the overall U.S. rate, but workers 44 years of age and under had lower rates.

Although the construction sector had the highest number of fatal injuries in 2006, the industry sectors with the highest fatality rates were agriculture, forestry, fishing, and hunting and mining.
Fatal occupational injuries in the private mining industry, 2003–06

Even though fatal work injuries in coal mining more than doubled in 2006 (from 22 in 2005 to 47 in 2006), oil and gas fatalities accounted for nearly two-thirds of the fatal work injuries in mining in 2006.

NOTE: Oil and gas extraction industries includes NAICS 211 (oil and gas extraction), NAICS 213111 (drilling oil and gas wells), and NAICS 213112 (support activities for oil and gas operations).
Although transportation and material moving occupations had the highest number of fatal work injuries in 2006, the highest fatality rate among major occupational groups was in farming, fishing, and forestry.

Fatal work injury rates were highest for fishers, aircraft pilots and flight engineers, and logging workers in 2006.
