#### Abstract

Transmission of material in this release is embargoed until 8:30 A.M. (EDT), Friday, October 7, 2005.

## THE EMPLOYMENT SITUATION: SEPTEMBER 2005

Nonfarm payroll employment was little changed ( $-35,000$ ) in September, and the unemployment rate rose to 5.1 percent, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. The measures of employment and unemployment reported in this news release reflect both the impact of Hurricane Katrina, which struck the Gulf Coast in late August, and ongoing labor market trends. Over the 12 months ending in August, payroll employment grew by an average of 194,000 a month and the unemployment rate trended downward.

## Hurricanes Katrina and Rita

Data for September are the first from the household survey (Current Population Survey or CPS) and the establishment survey (Current Employment Statistics survey or CES) to reflect the impact of Hurricane Katrina.

In September, the CPS was conducted largely according to standard procedures. Efforts were made to contact households in storm-affected areas with the exception of Orleans and Jefferson parishes in Louisiana, which were under mandatory evacuation orders when interviewer instructions were issued.

For the September CES estimates, several modifications to the usual estimation procedures were adopted to better reflect employment in Katrina-affected areas. The changes included: a) modification of procedures to impute employment counts for survey nonrespondents in the most heavily impacted areas, b) adjustments to sample weights for sample units in the more broadly defined disaster area to compensate for lower-than-average survey response rates, and c) modification of the adjustment procedure for the business net birth/death estimator to reflect likely changes in business birth/death patterns in the disaster areas.

Hurricane Rita made landfall during the September data collection period. As a result, response rates for both surveys were lower than normal in some areas. However, because the reference periods for both surveys occurred before Hurricane Rita struck, the impact of this storm on measures of employment and unemployment was negligible.

For more information on household and establishment survey procedures and estimates for September 2005, see http://www.bls.gov/katrina/cpscesquestions.htm. Or, call (202) 691-6378 for information about the household survey, and (202) 691-6555 for information about the establishment survey.

Table A. Major indicators of labor market activity, seasonally adjusted
(Numbers in thousands)

[^0]
## Unemployment (Household Survey Data)

Both the number of unemployed persons, 7.7 million, and the unemployment rate, 5.1 percent, rose in September. They had been trending down in recent months and remain lower than a year earlier. (See table A-1.)

The unemployment rates for most major worker groups-adult men (4.5 percent), adult women (4.6 percent), whites ( 4.5 percent), and Hispanics or Latinos ( 6.5 percent) rose in September. The jobless rates for teenagers ( 15.8 percent) and blacks ( 9.4 percent) showed little change. The unemployment rate for Asians was 4.1 percent, not seasonally adjusted. (See tables A-1, A-2, and A-3.)

In September, the number of persons unemployed due to job loss rose by 234,000 to 3.7 million. The number of newly unemployed-those who were unemployed less than 5 weeks-grew by 193,000 to 2.7 million. Both of these numbers had been trending down in recent months. (See tables A-8 and A-9.)

## Total Employment and the Labor Force (Household Survey Data)

Total employment ( 142.4 million) and the employment-population ratio ( 62.8 percent) were little changed in September. The labor force participation rate ( 66.2 percent) was unchanged over the month. (See table A-1.)

## Persons Not in the Labor Force (Household Survey Data)

In September, 1.4 million persons were marginally attached to the labor force, about the same as a year earlier. These individuals wanted and were available to work and had looked for a job sometime in the prior 12 months. They were not counted as unemployed, however, because they did not actively search for work in the 4 weeks preceding the survey. The number of discouraged workers, at 362,000 in September, was little changed from a year earlier. Discouraged workers, a subset of the marginally attached, were not currently looking for work specifically because they believed no jobs were available for them. The other 1.1 million persons marginally attached to the labor force had not searched for work for reasons such as school attendance or family responsibilities. (See table A-13.)

## Industry Payroll Employment (Establishment Survey Data)

Total nonfarm payroll employment was little changed in September ( $-35,000$ ), seasonally adjusted. This followed job gains of 277,000 in July and 211,000 in August (as revised). Hurricane Katrina caused job losses in September among many industries in the affected areas. At the national level, these stormrelated losses may have been offset or exacerbated in some industries by developments in the rest of the country. (State and metropolitan area payroll data, including information by industry, will be released by BLS on October 21.) (See table B-1.)

Retail trade lost 88,000 jobs in September, with declines spread across several component industries. Over the prior 12 months, employment in retail trade had increased by 18,000 per month on average. In September, there were job losses in clothing and accessories stores ( $-28,000$ ), sporting goods stores $(-17,000)$, and building material and garden supply stores $(-9,000)$. Over the month, food and beverage stores lost 30,000 jobs, much of which was due to store closings unrelated to the hurricane.

Employment in the leisure and hospitality industry fell by 80,000 in September, partly due to the hurricane. Employment in food services, which includes restaurants and drinking places, decreased by 54,000 over the month, after averaging monthly gains of 23,000 jobs during the 12 months ending in August. Amusements, gambling, and recreation lost 19,000 jobs in September.

In September, manufacturing employment was down by 27,000 and has declined by 118,000 over the year. The September job decline was concentrated in transportation equipment, reflecting a strike of 18,000 workers in the aerospace industry. Employment declines in electrical equipment and appliances $(-4,000)$ and paper and paper products $(-3,000)$ were offset by a gain in machinery manufacturing $(7,000)$.

Employment in transit and ground passenger transportation declined by 8,000 in September. Air transportation lost 6,000 jobs over the month; about half of the job loss was due to strike activity in the industry. Truck transportation employment was flat in September and has shown little change since June.

Professional and business services employment rose by 52,000 in September. More than half of the employment increase was in temporary help services $(32,000)$, where hurricane recovery efforts may have boosted hiring. Employment in architectural and engineering services rose by 8,000 over the month. These increases were partly offset by a decline in legal services $(-7,000)$.

Health care employment continued to grow in September, rising by 37,000. Ambulatory health care services, which include doctors' offices and outpatient clinics, added 16,000 jobs. Hospitals and nursing and residential care facilities also contributed to the employment gain.

Construction employment rose by 23,000 in September, about in line with the industry's average monthly gain over the past year. Job gains in September were concentrated largely among residential specialty trade contractors. Mining employment continued to trend upward, adding 5,000 jobs over the month. Support activities for mining operations accounted for much of the increase.

## Weekly Hours (Establishment Survey Data)

The average workweek for production or nonsupervisory workers on private nonfarm payrolls was unchanged at 33.7 hours in September, seasonally adjusted. The manufacturing workweek remained at 40.5 hours, and factory overtime was down by 0.1 hour to 4.4 hours. (See table B-2.)

The index of aggregate weekly hours of production or nonsupervisory workers on private nonfarm payrolls declined by 0.2 percent in September to $102.8(2002=100)$. The manufacturing index was down by 0.1 percent over the month to 93.6 . (See table B-5.)

## Hourly and Weekly Earnings (Establishment Survey Data)

Average hourly earnings of production or nonsupervisory workers on private nonfarm payrolls rose by 3 cents in September to $\$ 16.18$, seasonally adjusted. Average weekly earnings increased by 0.2 percent over the month to $\$ 545.27$. Over the year, average hourly earnings increased by 2.6 percent, and average weekly earnings grew by 2.3 percent. (See table B-3.)

The Employment Situation for October 2005 is scheduled to be released on Friday, November 4, at 8:30 A.M. (EST).

## Benchmark Revisions of the Payroll Survey

In accordance with usual practice, the Bureau of Labor Statistics has completed preliminary tabulations of the universe counts for the first quarter of this year. The tabulations indicate that the estimate of total nonfarm payroll employment will require a downward revision of 191,000, or one-tenth of one percent, for the March 2005 reference month. The historical average for benchmark revisions over the last 10 years has been plus or minus two-tenths of one percent. BLS will publish data revised to the March 2005 benchmark on February 3, 2006, with the release of data for January 2006.

## Explanatory Note

This news release presents statistics from two major surveys, the Current Population Survey (household survey) and the Current Employment Statistics survey (establishment survey). The household survey provides the information on the labor force, employment, and unemployment that appears in the A tables, marked HOUSEHOLD DATA. It is a sample survey of about 60,000 households conducted by the U.S. Census Bureau for the Bureau of Labor Statistics (BLS).

The establishment survey provides the information on the employment, hours, and earnings of workers on nonfarm payrolls that appears in the B tables, marked ESTABLISHMENT DATA. This information is collected from payroll records by BLS in cooperation with state agencies. The sample includes about 160,000 businesses and government agencies covering approximately 400,000 individual worksites. The active sample includes about one-third of all nonfarm payroll workers. The sample is drawn from a sampling frame of unemployment insurance tax accounts.

For both surveys, the data for a given month relate to a particular week or pay period. In the household survey, the reference week is generally the calendar week that contains the 12th day of the month. In the establishment survey, the reference period is the pay period including the 12 th, which may or may not correspond directly to the calendar week.

## Coverage, definitions, and differences between surveys

Household survey. The sample is selected to reflect the entire civilian noninstitutional population. Based on responses to a series of questions on work and job search activities, each person 16 years and over in a sample household is classified as employed, unemployed, or not in the labor force.

People are classified as employed if they did any work at all as paid employees during the reference week; worked in their own business, profession, or on their own farm; or worked without pay at least 15 hours in a family business or farm. People are also counted as employed if they were temporarily absent from their jobs because of illness, bad weather, vacation, labor-management disputes, or personal reasons.

People are classified as unemployed if they meet all of the following criteria: They had no employment during the reference week; they were available for work at that time; and they made specific efforts to find employment sometime during the 4 -week period ending with the reference week. Persons laid off from a job and expecting recall need not be looking for work to be counted as unemployed. The unemployment data derived from the household survey in no way depend upon the eligibility for or receipt of unemployment insurance benefits.

The civilian labor force is the sum of employed and unemployed persons. Those not classified as employed or unemployed are not in the labor force. The unemployment rate is the number unemployed as a percent of the labor force. The labor force participation rate is the labor force as a percent of the population, and the employmentpopulation ratio is the employed as a percent of the population.

Establishment survey. The sample establishments are drawn from private nonfarm businesses such as factories, offices, and stores, as well as federal, state, and local government entities. Employees on nonfarm payrolls are those who received pay for any part of the reference pay period, including persons on paid leave. Persons are counted in each job they hold. Hours and earnings data are for private businesses and relate only to production workers in the goods-producing sector and nonsupervisory workers in the service-providing sector. Industries are classified on the basis of their principal activity in accordance with the 2002 version of the North American Industry Classification System.

Differences in employment estimates. The numerous conceptual and methodological differences between the household and establishment surveys result in important distinctions in the employment estimates derived from the surveys. Among these are:

- The household survey includes agricultural workers, the self-employed, unpaid family workers, and private household workers among the employed. These groups are excluded from the establishment survey.
- The household survey includes people on unpaid leave among the employed. The establishment survey does not.
- The household survey is limited to workers 16 years of age and older. The establishment survey is not limited by age.
- The household survey has no duplication of individuals, because individuals are counted only once, even if they hold more than one job. In the establishment survey, employees working at more than one job and thus appearing on more than one payroll would be counted separately for each appearance.

## Seasonal adjustment

Over the course of a year, the size of the nation's labor force and the levels of employment and unemployment undergo sharp fluctuations due to such seasonal events as changes in weather, reduced or expanded production, harvests, major holidays, and the opening and closing of schools. The effect of such seasonal variation can be very large; seasonal fluctuations may account for as much as 95 percent of the month-to-month changes in unemployment.

Because these seasonal events follow a more or less regular pattern each year, their influence on statistical trends can be eliminated by adjusting the statistics from month to month. These adjustments make nonseasonal developments, such as declines in economic activity or increases in the participation of women in the labor force, easier to spot. For example, the large number of youth entering the labor force each June is likely to obscure any other changes that have taken place relative to May, making it difficult to determine if the level of economic activity has risen or declined. However, because the effect of students finishing school in previous years is known, the statistics for the current year can be adjusted to allow for a comparable change. Insofar as the seasonal adjustment is made correctly, the adjusted figure provides a more useful tool with which to analyze changes in economic activity.

Most seasonally adjusted series are independently adjusted in both the household and establishment surveys. However, the ad-
justed series for many major estimates, such as total payroll employment, employment in most supersectors, total employment, and unemployment are computed by aggregating independently adjusted component series. For example, total unemployment is derived by summing the adjusted series for four major age-sex components; this differs from the unemployment estimate that would be obtained by directly adjusting the total or by combining the duration, reasons, or more detailed age categories.

For both the household and establishment surveys, a concurrent seasonal adjustment methodology is used in which new seasonal factors are calculated each month, using all relevant data, up to and including the data for the current month. In the household survey, new seasonal factors are used to adjust only the current month's data. In the establishment survey, however, new seasonal factors are used each month to adjust the three most recent monthly estimates. In both surveys, revisions to historical data are made once a year.

## Reliability of the estimates

Statistics based on the household and establishment surveys are subject to both sampling and nonsampling error. When a sample rather than the entire population is surveyed, there is a chance that the sample estimates may differ from the "true" population values they represent. The exact difference, or sampling error, varies depending on the particular sample selected, and this variability is measured by the standard error of the estimate. There is about a 90-percent chance, or level of confidence, that an estimate based on a sample will differ by no more than 1.6 standard errors from the "true" population value because of sampling error. BLS analyses are generally conducted at the $90-$ percent level of confidence.

For example, the confidence interval for the monthly change in total employment from the household survey is on the order of plus or minus 430,000 . Suppose the estimate of total employment increases by 100,000 from one month to the next. The 90 -percent confidence interval on the monthly change would range from - 330,000 to 530,000 $(100,000+/-430,000)$. These figures do not mean that the sample results are off by these magnitudes, but rather that there is about a 90 -percent chance that the "true" over-the-month change lies within this interval. Since this range includes values of less than zero, we could not say with confidence that employment had, in fact, increased. If, however, the reported employment rise was half a million, then all of the values within the 90 -percent confidence interval would be greater than zero. In this case, it is likely (at least a 90-percent chance) that an employment rise had, in fact, occurred. At an unemployment rate of around 5.5 percent, the 90 -percent confidence interval for the monthly change in unemployment is about $+/-280,000$, and for the monthly change in the unemployment rate it is about $+/-.19$ percentage point.

In general, estimates involving many individuals or establishments have lower standard errors (relative to the size of the estimate) than estimates which are based on a small number of observations. The precision of estimates is also improved when the data are cumulated over time such as for quarterly and annual averages. The seasonal adjustment process can also improve the stability of the monthly estimates.

The household and establishment surveys are also affected by nonsampling error. Nonsampling errors can occur for many reasons, including the failure to sample a segment of the population, inability to obtain information for all respondents in the sample, inability or unwillingness of respondents to provide correct information on a timely basis, mistakes made by respondents, and errors made in the collection or processing of the data.

For example, in the establishment survey, estimates for the most recent 2 months are based on incomplete returns; for this reason, these estimates are labeled preliminary in the tables. It is only after two successive revisions to a monthly estimate, when nearly all sample reports have been received, that the estimate is considered final.

Another major source of nonsampling error in the establishment survey is the inability to capture, on a timely basis, employment generated by new firms. To correct for this systematic underestimation of employment growth, an estimation procedure with two components is used to account for business births. The first component uses business deaths to impute employment for business births. This is incorporated into the sample-based link relative estimate procedure by simply not reflecting sample units going out of business, but imputing to them the same trend as the other firms in the sample. The second component is an ARIMA time series model designed to estimate the residual net birth/ death employment not accounted for by the imputation. The historical time series used to create and test the ARIMA model was derived from the unemployment insurance universe micro-level database, and reflects the actual residual net of births and deaths over the past five years.

The sample-based estimates from the establishment survey are adjusted once a year (on a lagged basis) to universe counts of payroll employment obtained from administrative records of the unemployment insurance program. The difference between the March samplebased employment estimates and the March universe counts is known as a benchmark revision, and serves as a rough proxy for total survey error. The new benchmarks also incorporate changes in the classification of industries. Over the past decade, the benchmark revision for total nonfarm employment has averaged 0.2 percent, ranging from less than 0.05 percent to 0.5 percent.

## Additional statistics and other information

More comprehensive statistics are contained in Employment and Earnings, published each month by BLS. It is available for $\$ 27.00$ per issue or $\$ 53.00$ per year from the U.S. Government Printing Office, Washington, DC 20402. All orders must be prepaid by sending a check or money order payable to the Superintendent of Documents, or by charging to Mastercard or Visa.

Employment and Earnings also provides measures of sampling error for the household and establishment survey data published in this release. For unemployment and other labor force categories, these measures appear in tables 1-B through 1-D of its "Explanatory Notes." For the establishment survey data, the sampling error measures and the actual size of revisions due to benchmark adjustments appear in tables 2-B through 2-F of Employment and Earnings.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200; TDD message referral phone: 1-800-877-8339.

1 The population figures are not adjusted for seasonal variation; therefore, identical numbers appear in the unadjusted and seasonally adjusted columns.
2 Data not available.

NOTE: Estimates for the above race groups will not sum to totals shown in table A-1 because data are not presented for all races. Beginning in January 2005, data reflect revised population controls used in the household survey

${ }^{1}$ Data not available.
${ }^{2}$ Persons at work excludes employed persons who were absent from their jobs during the entire reference week for reasons such as vacation, illness, or industrial dispute. Part time for noneconomic reasons excludes persons who usually work full time but worked only 1 to 34 hours during the reference week for reasons such as holidays, illness, and
bad weather
NOTE: Detail for the seasonally adjusted data shown in this table will not necessarily add to totals because of the independent seasonal adjustment of the various series. Beginning in January 2005, data reflect revised population controls used in the household survey.

[^3]time ( 35 hours or more per week) or are on layoff from full-time jobs.
4 Part-time workers are unemployed persons who have expressed a desire to work
part time (less than 35 hours per week) or are on layoff from part-time jobs. NOTE: Detail shown in this table will not necessarily add to totals because of the independent seasonal adjustment of the various series. Beginning in January 2005, data reflect revised population controls used in the household survey.

| Information . | 178 | 168 | 5.4 | 4.9 |
| Financial activities | 374 | 260 | 4.0 | 2.7 |
| Professional and business services | 750 | 862 | 5.9 | 6.7 |
| Education and health services | 593 | 658 | 3.3 | 3.5 |
| Leisure and hospitality ............. | 854 | 842 | 7.5 | 7.3 |
| Other services | 301 | 307 | 4.9 | 4.9 |
| Agriculture and related private wage and salary workers .................... | 88 | 127 | 6.4 | 9.5 |
| Government workers ........... | 568 | 568 | 2.7 | 2.7 |
| Self employed and unpaid family workers ............................................. | 362 | 282 | 3.3 | 2.6 |

1 Persons with no previous work experience are included in the unemployed total.
NOTE: Beginning in January 2005, data reflect revised population controls used in the household survey.

Table A-12. Alternative measures of labor underutilization
(Percent)

| Measure | Not seasonally adjusted |  |  | Seasonally adjusted |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{aligned} & \text { Sept. } \\ & 2004 \end{aligned}$ | Aug. <br> 2005 | $\begin{aligned} & \text { Sept. } \\ & 2005 \end{aligned}$ | $\begin{aligned} & \text { Sept. } \\ & 2004 \end{aligned}$ | $\begin{gathered} \text { May } \\ 2005 \end{gathered}$ | $\begin{aligned} & \text { June } \\ & 2005 \end{aligned}$ | $\begin{aligned} & \text { July } \\ & 2005 \end{aligned}$ | $\begin{aligned} & \text { Aug. } \\ & 2005 \end{aligned}$ | $\begin{aligned} & \text { Sept. } \\ & 2005 \end{aligned}$ |
| U-1 Persons unemployed 15 weeks or longer, as a percent of the civilian labor force ............. | 1.9 | 1.6 | 1.6 | 2.0 | 1.8 | 1.6 | 1.6 | 1.8 | 1.7 |
| U-2 Job losers and persons who completed temporary jobs, as a percent of the civilian labor force $\qquad$ | 2.5 | 2.2 | 2.3 | 2.7 | 2.4 | 2.5 | 2.4 | 2.3 | 2.5 |
| U-3 Total unemployed, as a percent of the civilian labor force (official unemployment rate) | 5.1 | 4.9 | 4.8 | 5.4 | 5.1 | 5.0 | 5.0 | 4.9 | 5.1 |
| U-4 Total unemployed plus discouraged workers, as a percent of the civilian labor force plus discouraged workers $\qquad$ | 5.4 | 5.1 | 5.1 | 5.7 | 5.4 | 5.3 | 5.3 | 5.2 | 5.3 |
| U-5 Total unemployed, plus discouraged workers, plus all other marginally attached workers, as a percent of the civilian labor force plus all marginally attached workers $\qquad$ | 6.1 | 5.9 | 5.7 | 6.4 | 6.0 | 6.0 | 6.0 | 5.9 | 6.0 |
| U-6 Total unemployed, plus all marginally attached workers, plus total employed part time for economic reasons, as a percent of the civilian labor force plus all marginally attached workers $\qquad$ | 8.9 | 8.8 | 8.5 | 9.4 | 8.9 | 9.0 | 8.9 | 8.9 | 9.0 |

NOTE: Marginally attached workers are persons who currently are neither working nor looking for work but indicate that they want and are available for a job and have looked for work sometime in the recent past. Discouraged workers, a subset of the marginally attached, have given a job-market related reason for not currently looking for a job. Persons employed part time for economic reasons are those who want and are available for full-time work but
have had to settle for a part-time schedule. For further information, see "BLS introduces new range of alternative unemployment measures," in the October 1995 issue of the Monthly Labor Review. Beginning in January 2005, data reflect revised population controls used in the household survey.

Table A-13. Persons not in the labor force and multiple jobholders by sex, not seasonally adjusted
(Numbers in thousands)

| Category | Total |  | Men |  | Women |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Sept. $2004$ | Sept. $2005$ | Sept. $2004$ | Sept. <br> 2005 | Sept. $2004$ | Sept. <br> 2005 |

${ }^{1}$ See footnote 1 , table B-2.
$\mathrm{p}=$ preliminary.
NOTE: The indexes of aggregate weekly payrolls are calculated by dividing the current month's estimates of aggregate payrolls by
the corresponding 2002 annual average levels. Aggregate payroll estimates are the product of estimates of average hourly earnings, average weekly hours, and production or nonsupervisory worker employment.

${ }^{1}$ Based on seasonally adjusted data for 1 -, 3-, and 6-month spans and unadjusted data for the 12-month span.
$\mathrm{p}=$ preliminary.
NOTE: Figures are the percent of industries with employment
increasing plus one-half of the industries with unchanged employment, where 50 percent indicates an equal balance between industries with increasing and decreasing employment.

[^0]:    ${ }^{1}$ Includes other industries, not shown separately.
    ${ }^{2}$ Quarterly averages and the over-the-month change are calculated using unrounded data.
    ${ }^{3}$ Data relate to private production or nonsupervisory workers.
    $\mathrm{p}=$ preliminary.

[^1]:    1 The population figures are not adjusted for seasonal variation; therefore, identical numbers appear in the unadjusted and seasonally adjusted columns.

[^2]:    ${ }_{1}$ Data not available.
    2 Eata not available.
    Employed full-time workers are persons who usually work 35 hours or more per week.
    ${ }^{3}$ Employed part-time workers are persons who usually work less than 35 hours per
    NOTE: Detail for the seasonally adjusted data shown in this table will not necessarily add to totals because of the independent seasonal adjustment of the various series. Beginning in January 2005, data reflect revised population controls used in the household survey.

[^3]:    Unemployment as a percent of the civilian labor force.
    2 Not seasonally adjusted.
    3 Full-time workers are unemployed persons who have expressed a desire to work full

[^4]:    1 Data refer to persons who have searched for work during the prior 12 months and were available to take a job during the reference week.
    2 Includes thinks no work available, could not find work, lacks schooling or training, employer thinks too young or old, and other types of discrimination.
    ${ }^{3}$ Includes those who did not actively look for work in the prior 4 weeks for such reasons as school or family responsibilities, ill health, and transportation problems, as well

[^5]:    ${ }^{1}$ Includes other industries, not shown separately.
    ${ }^{2}$ Includes motor vehicles, motor vehicle bodies and trailers,
    and motor vehicle parts.

[^6]:    ${ }^{3}$ Includes ambulatory health care services, hospitals, and nursing and residential care facilities.
    $\mathrm{p}=$ preliminary.

[^7]:    ${ }^{1}$ Data relate to production workers in natural resources and mining and manufacturing, construction workers in construction, and nonsupervisory approximately four-fifths of the total employment on private nonfarm payrolls.

[^8]:    ${ }^{1}$ See footnote 1 , table B-2.

[^9]:    ${ }^{1}$ See footnote 1 , table B-2.
    ${ }^{2}$ The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) is used to deflate this series.
    ${ }^{3}$ Change was -0.6 percent from July 2005 to Aug. 2005, the latest month available.

[^10]:    ${ }^{1}$ See footnote 1, table B-2.
    ${ }^{2}$ Includes motor vehicles, motor vehicle bodies and trailers, and motor vehicle parts.
    $\mathrm{p}=$ preliminary.
    NOTE: The indexes of aggregate weekly hours are calculated by
