PRODUCTIVITY AND COSTS

First Quarter 2019, Revised

Nonfarm business sector labor productivity increased 3.4 percent in the first quarter of 2019, the U.S. Bureau of Labor Statistics reported today, as output increased 3.9 percent and hours worked increased 0.5 percent. (All quarterly percent changes in this release are seasonally adjusted annual rates.) From the first quarter of 2018 to the first quarter of 2019, productivity increased 2.4 percent, reflecting a 3.9-percent increase in output and a 1.5-percent increase in hours worked. (See chart 1 and table A1.) The four-quarter increase in productivity is the largest since a 2.7-percent gain in the third quarter of 2010.

Labor productivity, or output per hour, is calculated by dividing an index of real output by an index of hours worked by all persons, including employees, proprietors, and unpaid family workers.

Chart 1. Labor productivity, nonfarm business, 2015Q1 – 2019Q1

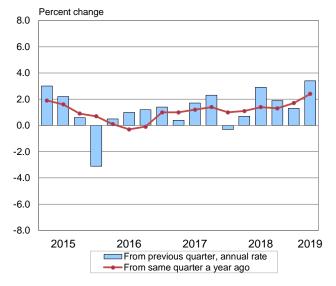

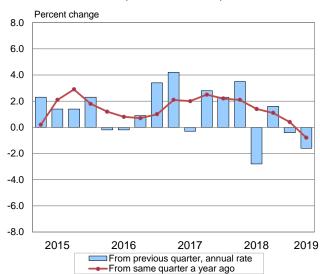

Chart 2. Unit labor costs, nonfarm business, 2015Q1 - 2019Q1

Unit labor costs in the nonfarm business sector decreased 1.6 percent in the first quarter of 2019, and decreased 0.8 percent over the last four quarters—the lowest four-quarter rate since a 1.7-percent decline in the fourth quarter of 2013. (See chart 2 and table 2.)

BLS calculates unit labor costs as the ratio of hourly compensation to labor productivity. Increases in hourly compensation tend to increase unit labor costs, and increases in output per hour tend to reduce them.

Manufacturing sector labor productivity increased 0.4 percent in the first quarter of 2019, as output decreased 2.0 percent and hours worked decreased 2.4 percent. Productivity declined 0.6 percent in the durable manufacturing sector, reflecting a 2.8-percent decrease in output and a 2.2-percent decrease in hours worked. Productivity increased 1.6 percent in the nondurable manufacturing sector as output fell 1.1 percent but hours worked fell 2.6 percent. Over the last four quarters, total manufacturing sector productivity increased 0.8 percent, as output increased 1.6 percent and hours worked increased 0.7 percent. Unit labor costs in the manufacturing sector increased 2.0 percent in the first quarter of 2019 and saw no change from the same quarter a year ago. (See tables A1 and 3.)

The concepts, sources, and methods used for the manufacturing output series differ from those used in the business and nonfarm business output series; these output measures are not directly comparable. See the Technical Notes for a more detailed explanation. (See page 6.)

Preliminary first-quarter 2019 measures were announced today for the **nonfinancial corporate sector.** Productivity decreased 0.4 percent in the first quarter of 2019 and increased 1.3 percent over the last four quarters. Unit profits of nonfinancial corporations fell at a 17.9 percent annual rate in the first quarter of 2019 and increased 3.7 percent over the last four quarters. (See table 6.)

Revised measures

Measures released today are based on more recent source data than were available for the preliminary report. Table B1 presents previous and revised productivity and related measures for the business, nonfarm business, and manufacturing sectors for the first quarter of 2019.

In the **first quarter of 2019**, nonfarm business productivity rose 3.4 percent, rather than 3.6 percent as reported May 2, due solely to a 0.2-percentage point downward revision to output. Unit labor costs were revised down and decreased 1.6 percent, as hourly compensation was revised down by more than productivity. In the manufacturing sector, productivity was revised down from an increase of 1.7 percent to an increase of 0.4 percent, due primarily to a 1.0-percentage point downward revision to output; hours worked were revised up 0.2 percentage points. Unit labor costs increased 2.0 percent rather than the preliminary estimate of 0.8 percent, reflecting the downward revision to productivity; hourly compensation increased at the same 2.4 percent rate reported previously.

Table B2 shows previous and revised productivity and related measures for the business, nonfarm business, manufacturing, and nonfinancial corporate sectors for the fourth quarter of 2018.

In the **fourth quarter of 2018**, labor productivity in the nonfarm business sector increased at the same 1.3-percent rate reported May 2. Hourly compensation was revised down from the previously reported increase of 3.9 percent to a 0.9-percent increase. As a result, unit labor costs decreased 0.4 percent in the fourth quarter of 2018, rather than increasing 2.5 percent. Total manufacturing sector productivity increased 1.0 percent in the fourth quarter of 2018, a smaller increase than previously reported. Hourly compensation was revised down 0.9 percentage point to a 3.4-percent increase; this led to a downward revision to unit labor costs, which rose 2.4 percent rather than increasing 3.2 percent.

In the nonfinancial corporate sector, productivity rose 1.4 percent in the fourth quarter of 2018 rather than increasing 3.2 percent as previously reported, due solely to a downward revision to output. Annual average productivity in the nonfinancial corporate sector increased 2.0 percent in 2018, rather than the preliminary estimate of 2.1 percent.

Complete quarterly and annual data series can be found on the Productivity and Costs home page: www.bls.gov/lpc/#data.

The preliminary Productivity and Costs news release for second-quarter 2019 is scheduled to be released on Thursday, August 15, 2019 at 8:30 a.m. (EDT).

Table A1. Labor productivity growth and related measures - revised first-quarter 2019

TECHNICAL NOTES

Labor Hours

Hours data for the labor productivity and cost measures include hours worked for all persons working in the sector—wage and salary workers, the self-employed and unpaid family workers. The primary source of hours and employment data is the BLS Current Employment Statistics (CES) program, which provides monthly survey data on the number of jobs held by wage and salary workers in nonfarm establishments, counting a person who is employed by two or more establishments at each place of employment. The CES also provides average weekly paid hours of production and nonsupervisory workers in these establishments. Weekly paid hours are adjusted to hours worked using data from the National Compensation Survey (NCS) for 1996 forward and data from the BLS Hours at Work survey, conducted for this purpose, prior to 1990. Between 1990 and 1995, weekly paid hours are adjusted to hours at work using a combination of NCS and Hours at Work survey data. The Office of Productivity and Technology estimates average weekly hours at work for nonproduction and supervisory workers using information from the Current Population Survey (CPS), the CES, and the NCS.

Data from the CPS are used to estimate hours worked for farm labor, nonfarm proprietors, and nonfarm unpaid family workers. Using CPS information on employment and hours worked at primary jobs and all other jobs, separately, the BLS productivity measures assign all hours worked to the appropriate industrial sector. Hours for government enterprises are derived from the CPS, the CES, and the National Income and Product Accounts (NIPA) prepared by the Bureau of Economic Analysis (BEA) of the Department of Commerce.

Output

Business sector output is a chain-type, current-weighted index constructed after excluding from gross domestic product (GDP) the following outputs: general government, nonprofit institutions, and private households (including owner-occupied housing). Corresponding exclusions also are made in labor hours. Business output accounted for about 77 percent of the value of GDP in 2018. Nonfarm business, which excludes farming, accounted for about 76 percent of GDP in 2018.

Annual indexes for manufacturing and its durable and nondurable goods components are constructed by deflating current-dollar industry value of production data from the U.S. Bureau of the Census with deflators from the BLS. These deflators are based on data from the BLS Producer Price Index program and other sources. The industry shipments are aggregated using annual weights, and intrasector transactions are removed. Quarterly manufacturing output measures are based on the indexes of industrial production prepared monthly by the Board of Governors of the Federal Reserve System, adjusted to be consistent with annual indexes of manufacturing sector output prepared by BLS.

Nonfinancial corporate output is a chain-type, current-weighted index calculated on the basis of the costs incurred and the incomes earned from production. The output measure excludes the following outputs from GDP: general government; nonprofit institutions; private households; unincorporated business; and those corporations classified as offices of bank holding companies, offices of other holding companies, or offices in the finance and insurance sector. Nonfinancial corporations accounted for about 55 percent of the value of GDP in 2018.

Labor Productivity

The measure describes the relationship between real output and the labor time involved in its production. Measures of labor productivity growth show the changes from period to period in the amount of goods and services produced per hour worked. They reflect the joint effects of many influences, including changes in technology; capital investment; level of output; utilization of capacity, energy, and materials; the organization of production; managerial skill; and the characteristics and effort of the work force.

Labor Compensation

The measure includes accrued wages and salaries, supplements, employer contributions to employee benefit plans, and taxes. Estimates of labor compensation by major sector, required for measures of hourly compensation and unit labor costs, are based primarily on employee compensation data from the NIPA, prepared by the BEA. The compensation of employees in general government, nonprofit institutions and private households are subtracted from compensation of employees in domestic industries to derive employee compensation for the business sector. The labor compensation of proprietors cannot be explicitly identified and must be estimated. This is done by assuming that proprietors have the same hourly compensation as employees in the same sector. The quarterly labor productivity and cost measures do not contain estimates of compensation for unpaid family workers.

Unit Labor Costs

These measures describe the relationship between compensation per hour and labor productivity, or real output per hour, and can be used as an indicator of inflationary pressure on producers. Increases in hourly compensation increase unit labor costs; labor productivity increases offset compensation increases and lower unit labor costs.

Presentation of the data

The quarterly data in this release are presented in three ways: as percent changes from the previous quarter presented at a compound annual rate, as percent changes from the corresponding quarter of the previous year, and as index number series where 2012=100. Annual data are presented both as index number series and percent changes from the previous year.

The index numbers and rates of change reported in the productivity and costs news release are rounded to one decimal place. All percent changes in this release and on the BLS web site are calculated using index numbers to three decimal places. A complete historical series of these index numbers are available at the BLS web site, www.bls.gov/data/home.htm, or by contacting the BLS Division of Major Sector Productivity (Telephone 202-691-5606 or email productivity@bls.gov).

For a more detailed explanation of methodology see "Technical Information About the Major Sector Productivity and Costs Methods" at www.bls.gov/lpc/lpcmethods.pdf.

Information in this release will be made available to sensory-impaired individuals upon request. Voice phone: 202-691-5200; Federal Relay Service number: 1-800-877-8339.

June 6, 2019

r=revised Source: Bureau of Labor Statistics

SOURCES: Output data are from the Bureau of Economic Analysis and the Census Bureau of the U.S. Department of Commerce; the Bureau of Labor Statistics, U.S. Department of Labor; and the Federal Reserve Board. Hours and compensation data are from the Bureau of Labor Statistics and the Bureau of Economic Analysis.

RELIABILITY: Productivity and cost measures are regularly revised as more complete information becomes available. The measures are first published within 40 days of the close of the reference period; revisions appear 30 days later, and second revisions after an additional 60 days. In the business sector, the third publication (second revision) of a quarterly index of output per hour of all persons has differed from the initial value by between -1.5 and 1.4 index points approximately 95 percent of the time. This interval is based on the performance of this measure between the fourth quarter of 1995 and the fourth quarter of 2018.

Table Footnotes

- (1) Wages and salaries of employees plus employers' contributions for social insurance and private benefit plans. Except for nonfinancial corporations, where there are no self-employed, data also include an estimate of wages, salaries, and supplemental payments for the self-employed.
- (2) The change for recent quarters is based on the Consumer Price Index for all urban consumers (CPI-U). The trend from 1978-2018 is based on the Consumer Price Index research series (CPI-U-RS).
- (3) Unit nonlabor payments include profits, consumption of fixed capital, taxes on production and imports less subsidies, net interest and miscellaneous payments, business current transfer payments, rental income of persons, and the current surplus of government enterprises.
- (4) Current dollar output divided by the output index.
- (5) Quarterly changes: Percent change compounded at annual rate is calculated using index numbers to three decimal places. Indexes published in the news release are rounded to one decimal place for convenience. Annual changes: Percent change is calculated using annual indexes to three decimal places.
- (6) Unit nonlabor costs include consumption of fixed capital, taxes on production and imports less subsidies, net interest and miscellaneous payments, and business current transfer payments.
- (7) Total unit costs are the sum of unit labor and nonlabor costs.
- (8) Unit profits include corporate profits before tax with inventory valuation and capital consumption adjustment.
