

NEWS RELEASE

BUREAU OF LABOR STATISTICS
U. S. DEPARTMENT OF LABOR

For release 10:00 a.m. (ET) Thursday, April 21, 2022

USDL-22-0675

Technical information: (202) 691-6378 • cpsinfo@bls.gov • www.bls.gov/cps
Media contact: (202) 691-5902 • PressOffice@bls.gov

EMPLOYMENT SITUATION OF VETERANS — 2021

The unemployment rate for veterans who served on active duty in the U.S. Armed Forces at any time since September 2001—a group referred to as Gulf War-era II veterans—declined to 4.6 percent in 2021, the U.S. Bureau of Labor Statistics reported today. The jobless rate for all veterans decreased to 4.4 percent in 2021. In August 2021, 44 percent of Gulf War-era II veterans had a service-connected disability, compared with 27 percent of all veterans.

This information was obtained from the Current Population Survey (CPS), a monthly sample survey of about 60,000 eligible households that provides data on employment, unemployment, and persons not in the labor force in the United States. Data about veterans are collected monthly in the CPS; these monthly data are the source of the 2021 annual averages presented in this news release. In August 2021, a supplement to the CPS collected additional information about veterans on topics such as service-connected disability and veterans' current or past Reserve or National Guard membership. The supplement was co-sponsored by the U.S. Department of Veterans Affairs and the U.S. Department of Labor's Veterans' Employment and Training Service. For more information, see the Technical Note in this news release.

Highlights from the 2021 data:

- The unemployment rate for all veterans (4.4 percent) was lower than the rate for nonveterans (5.3 percent) in 2021. (See table A.)
- Unemployment rates for both male and female veterans decreased in 2021. The rate for male veterans was 4.4 percent, little different from the rate of 4.2 percent for female veterans. (See table A.)
- Unemployment rates declined over the year for veterans of all service periods: Gulf War-era II veterans (to 4.6 percent in 2021); Gulf War-era I veterans (3.5 percent); World War II, Korean War, and Vietnam era veterans (4.4 percent); and veterans of other service periods (5.0 percent). However, these rates remain above their levels in 2019, prior to the onset of the coronavirus (COVID-19) pandemic. (See table 1.)
- Unemployment rates for White and Black veterans were lower than for their nonveteran counterparts in 2021, while the rates for Asian and Hispanic veterans were not statistically different than their nonveteran counterparts. (See table 1.)

- Among the 386,000 unemployed veterans in 2021, 56 percent were ages 25 to 54, 39 percent were age 55 and over, and 5 percent were ages 18 to 24. (See table 2A.)
- Among Gulf War-era II veterans, the unemployment rate of veterans with a service-connected disability declined to 3.2 percent and the rate for veterans with no disability decreased to 3.6 percent in August 2021. (See table 7.)
- Gulf War-era II veterans who reported a service-connected disability rating of less than 30 percent were much more likely to be in the labor force than those with a rating of 60 percent or higher in August 2021 (94.4 percent compared with 63.8 percent). (See table 7.)
- In August 2021, 27 percent of employed veterans with a service-connected disability worked in the public sector, compared with 21 percent of veterans with no disability and 13 percent of nonveterans. (See table 8.)
- In 2021, the unemployment rate of veterans varied across the country, ranging from 1.6 percent in Kentucky to 7.6 percent in Washington. (See table 6A.)

The Veteran Population

In 2021, 18.5 million men and women were veterans, accounting for about 7 percent of the civilian noninstitutional population age 18 and over. Of all veterans, about 1 in 10 were women. In the survey, veterans are defined as men and women who have previously served on active duty in the U.S. Armed Forces and who were civilians at the time these data were collected. Veterans are much more likely to be men than are nonveterans, and they also tend to be older. In part, this reflects the characteristics of veterans who served during World War II, the Korean War, and the Vietnam era, all of whom are now over 60 years old. Veterans who served during these wartime periods accounted for about 36 percent (6.6 million) of the total veteran population in 2021. Forty-two percent of veterans (7.9 million) served during Gulf War era I (August 1990 to August 2001) or Gulf War era II (September 2001 to present). Twenty-two percent (4.1 million) served outside the designated wartime periods. (See tables 1 and 2A.)

Gulf War-era II Veterans

In 2021, there were 4.7 million veterans who had served during Gulf War era II (September 2001 to present). Seventeen percent of these veterans were women, compared with about 4 percent of veterans from World War II, the Korean War, and the Vietnam era. Two-thirds of all Gulf War-era II veterans were between the ages of 25 and 44. (See tables 1 and 2A.)

In 2021, the unemployment rate for Gulf War-era II veterans was 4.6 percent, down considerably from the rate in 2020 (7.3 percent) but up from 2019 (3.5 percent), prior to the COVID-19 pandemic. Among Gulf War-era II veterans, the unemployment rates for men and women both declined in 2021 (to 4.6 percent and 4.9 percent, respectively). These rates were not statistically different from each other. (See table A.)

The unemployment rate for male Gulf War-era II veterans, at 4.6 percent, was lower than the rate for male nonveterans, at 5.5 percent, in 2021. By age, unemployment rates for male Gulf War-era II veterans and nonveterans were not statistically different, with one exception: 45- to 54-year-old male

Gulf War-era II veterans had an unemployment rate of 2.6 percent, lower than the rate of 4.2 percent for their nonveteran counterparts. (See table 2B.)

The unemployment rate for female Gulf War-era II veterans was 4.9 percent in 2021, not statistically different from the rate for female nonveterans (5.1 percent). By age, unemployment rates for female Gulf War-era II veterans and nonveterans were not statistically different. (See table 2C.)

Employed Gulf War-era II veterans were twice as likely to work in the public sector in 2021 as employed nonveterans—27 percent versus 13 percent. Among the employed, 15 percent of Gulf War-era II veterans worked for the federal government, compared with 2 percent of nonveterans. (See table 5.)

In August 2021, 41 percent of Gulf War-era II veterans reported serving in Iraq, Afghanistan, or both locations. These veterans had an unemployment rate of 2.6 percent, not statistically different than the rate for Gulf War-era II veterans who served elsewhere (3.6 percent). (See table 10.)

Gulf War-era I Veterans

In 2021, of the 3.2 million veterans who served during Gulf War era I (August 1990 to August 2001), the proportion who were women (16 percent) was similar to that for Gulf War-era II veterans (17 percent). All Gulf War-era I veterans were age 35 and over in 2021, compared with 62 percent of Gulf War-era II veterans. Forty-eight percent of Gulf War-era I veterans were ages 45 to 54, 26 percent were ages 55 to 64, 15 percent were ages 35 to 44, and 11 percent were age 65 and over. (See tables 1 and 2A.)

The unemployment rate for Gulf War-era I veterans was 3.5 percent in 2021, down by 1.3 percentage points from 2020. The jobless rate for Gulf War-era I veterans in 2021 was above its pre-pandemic rate of 2.6 percent in 2019.

In 2021, the unemployment rate for male Gulf War-era I veterans (3.6 percent) was lower than that of their Gulf War-era II counterparts (4.6 percent). The difference in unemployment rates reflects, at least in part, the older age profile of veterans who served during Gulf War era I. Younger people—whether veterans or nonveterans—tend to have higher unemployment rates than older people. The rate for female Gulf War-era I veterans (3.0 percent) was lower than the rate for female Gulf War-era II veterans (4.9 percent). Among Gulf War-era I veterans, the unemployment rate declined for both men and women in 2021; the rates for men and women were not statistically different. (See tables 2B and 2C.)

Veterans of Other Service Periods

In 2021, 4.1 million veterans had served on active duty during "other service periods," mainly between the Korean War and the Vietnam era and between the Vietnam era and Gulf War era I. All veterans from this period of service were age 45 and over at the time of the survey. Fifty percent of these veterans were ages 55 to 64, 42 percent were age 65 and over, and 8 percent were ages 45 to 54. In 2021, 1 in 10 veterans of other service periods were women. (See table 2A.)

The jobless rate for veterans of other service periods declined over the year to 5.0 percent in 2021 but remains higher than the rate in 2019 (3.0 percent). Among veterans of other service periods, the unemployment rate for men (5.1 percent) was not statistically different from the rate for women (4.2

percent) in 2021. The jobless rate for male veterans of other service periods declined over the year, while the rate for women was little different from the prior year. (See table 1.)

Veterans with a Service-connected Disability

In August 2021, 4.9 million veterans, or 27 percent of the total, had a service-connected disability. Veterans with a service-connected disability are assigned a disability rating by the U.S. Department of Veterans Affairs or the U.S. Department of Defense. Ratings range from 0 to 100 percent, in increments of 10 percentage points, depending on the severity of the condition. (See table 7.)

The unemployment rate for veterans with a service-connected disability declined by 2.8 percentage points to 3.4 percent in August 2021. The rate for veterans with no disability declined to 4.1 percent and was not statistically different from the rate for veterans with a service-connected disability. The unemployment rates for male and female veterans with a service-connected disability also declined over the year to 3.5 percent and 2.8 percent, respectively, in August 2021. These rates were not statistically different from each other. The labor force participation rate for veterans with a service-connected disability (49.7 percent) was higher than the rate for veterans with no disability (44.9 percent).

Among veterans with a service-connected disability, 23 percent reported a disability rating of less than 30 percent, while 47 percent had a rating of 60 percent or higher. In August 2021, veterans with a service-connected disability rating of less than 30 percent were much more likely to be in the labor force than those with a rating of 60 percent or higher (56.9 percent versus 43.0 percent). The unemployment rate for veterans with a disability rating of less than 30 percent was 4.1 percent, little different than the rate for those with a disability rating of 60 percent or higher, at 4.3 percent.

Among veterans who served during Gulf War era II, 44 percent (2.0 million) reported a service-connected disability in August 2021. The labor force participation rate of all Gulf War-era II veterans with a service-connected disability was 72.9 percent, lower than the rate for veterans from this period with no service-connected disability (84.3 percent). Among Gulf War-era II veterans, the unemployment rate for those with a service-connected disability was 3.2 percent, not statistically different from those with no disability (3.6 percent).

Among Gulf War-era II veterans with a service-connected disability, 15 percent reported a disability rating of less than 30 percent and 56 percent reported a disability rating of 60 percent or higher in August 2021. Gulf War-era II veterans who reported a disability rating of less than 30 percent were much more likely to be in the labor force than those with a rating of 60 percent or higher (94.4 percent compared with 63.8 percent). The unemployment rate for veterans with a disability rating of less than 30 percent was 4.9 percent in August 2021, not statistically different than the rate for those with a disability rating of 60 percent or higher, at 3.7 percent.

In August 2021, 31 percent (932,000) of veterans who served during Gulf War era I reported a service-connected disability. Their labor force participation rate (63.3 percent) was lower than the rate for Gulf War-era I veterans who did not have a service-connected disability (78.6 percent). The unemployment rate for Gulf War-era I veterans with a service-connected disability (2.1 percent) was lower than the rate for those without a service-connected disability (4.5 percent).

Fourteen percent (540,000) of veterans who served during other service periods reported a service-connected disability in August 2021. The labor force participation rate of these veterans (35.4 percent)

was lower than their counterparts without a service-connected disability (41.2 percent). The unemployment rates were not statistically different for veterans with a service-connected disability (8.7 percent) and those with no disability (5.1 percent).

Regardless of period of service, many veterans with a service-connected disability worked in the public sector. In August 2021, 27 percent of employed veterans with a service-connected disability worked in federal, state, or local government, compared with 21 percent of veterans with no disability and 13 percent of nonveterans. Eighteen percent of employed veterans with a service-connected disability worked for the federal government, compared with 9 percent of veterans with no disability and 2 percent of nonveterans. (See table 8.)

Reserve and National Guard Membership

In August 2021, 37 percent of Gulf War-era II veterans were current or past members of the Reserve or National Guard. The labor force participation rate was higher for veterans of this period who were current or past members of the Reserve or National Guard (82.8 percent) than for veterans who had never been members (77.1 percent). Among Gulf War-era II veterans, those who were current or past members of the Reserve or National Guard had an unemployment rate (2.0 percent) that was lower than the rate for those who had never been members (4.0 percent). (See table 9.)

Adjustments to Veteran Population Estimates

Effective with data for January 2021, estimates for veterans incorporate population controls derived from the Department of Veterans Affairs' new veteran population model. In accordance with usual practice, BLS did not revise estimates for previous years. Information about the Veteran Population Projection Model (VetPop2018) is available from the Department of Veterans Affairs at www.va.gov/vetdata/docs/Demographics/New_Vetpop_Model/VP_18_A_Brief_Description.pdf.

Imputed Data for Veterans Who Served Prior to the Vietnam Era

Due to a programming error in the August 2021 survey instrument, information on the presence and severity of a service-connected disability was not obtained for veterans who served in periods prior to the Vietnam era (August 1964-April 1975). Veterans whose service included the Vietnam era were asked the questions, even if they also served in earlier periods. Missing data for individuals whose service ended before August 1964 were imputed using information collected in the August 2020 Veterans Supplement. This imputation had a limited effect on the overall estimates of veterans with a service-connected disability because veterans of periods prior to the Vietnam era were a relatively small share of total veterans in August 2021. However, the imputations have a larger impact on the presence and severity of a service-connected disability for veterans of the WW II, Korean War, and Vietnam era in addition to veterans of the other service periods group. Users should be mindful of the presence of imputed data for these categories when they appear on tables 7 and 8 of this news release. The programming error did not affect any other data series in this news release.

Table A. Employment status of the civilian noninstitutional population 18 years and over by veteran status, period of service, and sex, 2020-2021 annual averages

[Numbers in thousands]

Veteran status and period of service	2020			2021		
	Total	Men	Women	Total	Men	Women

NOTE: Veterans are men and women who served on active duty in the U.S. Armed Forces and were not on active duty at the time of the survey. Gulf War-era II veterans served on active duty anywhere in the world sometime since September 2001. Nonveterans never served on active duty in the U.S. Armed Forces. Effective with data for January 2021, estimates for veterans incorporate population controls derived from an updated Department of Veterans Affairs population model.

Technical Note

The data in this release were collected through the Current Population Survey (CPS). The CPS—a monthly survey of about 60,000 eligible households conducted by the U.S. Census Bureau for the Bureau of Labor Statistics—obtains information on employment and unemployment among the nation's civilian noninstitutional population age 16 and over.

Most of the data in this release are annual averages, compiled from the results of the monthly survey. In August, a supplement to the CPS collected additional information about veterans on topics such as service-connected disability, veterans' Reserve or National Guard status, and veterans who served in Iraq and/or Afghanistan. The supplement was co-sponsored by the U.S. Department of Veterans Affairs and by the U.S. Department of Labor's Veterans' Employment and Training Service. Questions were asked of persons 17 years of age and older regarding their prior service in the U.S. Armed Forces. Data are tabulated for persons 18 years of age and older.

If you are deaf, hard of hearing, or have a speech disability, please dial 7-1-1 to access telecommunications relay services.

Definitions

The definitions underlying the data in this release are as follows:

Veterans are men and women who previously served on active duty in the U.S. Armed Forces and who were civilians at the time they were surveyed. Members of the Reserve and National Guard are counted as veterans if they had ever been called to active duty. Persons who are on active duty at the time of the survey are outside the scope of the survey and thus not in the estimates shown here, as are persons who reside in institutions, such as nursing homes and prisons.

Nonveterans are men and women who never served on active duty in the U.S. Armed Forces.

World War II, Korean War, Vietnam-era, and Gulf War-era veterans are men and women who served in the U.S. Armed Forces during these periods of service, regardless of where in the world they served. Veterans who served in more than one wartime period are classified in the most recent one.

Veterans of other service periods are men and women who served in the U.S. Armed Forces at any time other than World War II, the Korean War, the

Vietnam era, or the Gulf War era. Although U.S. Armed Forces were engaged in several armed conflicts during other service periods, these conflicts were more limited in scope and included a smaller proportion of the Armed Forces than the selected wartime periods. Veterans who served during one of the selected wartime periods and during another period are classified in the wartime period.

Veteran status is obtained from responses to the question, "Did you ever serve on active duty in the U.S. Armed Forces?"

Period of service identifies when a veteran served in the Armed Forces, but not the location of their service. It is obtained from answers to the question asked of veterans, "When did you serve on active duty in the U.S. Armed Forces?" The following service periods are identified:

Gulf War era II — September 2001-present
Gulf War era I — August 1990-August 2001
Vietnam era — August 1964-April 1975
Korean War — July 1950-January 1955
World War II — December 1941-December 1946
Other service periods — All other time periods

Veterans could have served anywhere in the world during these periods of service. Veterans are counted only in one period of service, their most recent wartime period. Veterans who served in more than one wartime period are classified in the most recent one. Veterans who served in both a wartime period and any other service period are classified in the wartime period. The period-of-service definitions are modified occasionally to reflect changes in law, regulations, and program needs of the survey sponsors.

Veterans who served in Iraq, Afghanistan, or both are individuals who served in Iraq at any time since March 2003, in Afghanistan at any time since October 2001, or in both locations. Service in Iraq or Afghanistan is determined by answers to two questions: "Did you serve in Iraq, off the coast of Iraq, or did you fly missions over Iraq at any time since March 2003?" and "Did you serve in Afghanistan, or did you fly missions over Afghanistan, at any time since October 2001?"

Presence of service-connected disability is determined by answers to two questions beginning in August 2021: "Have you filed a claim for or received

a rating from the Department of Veterans Affairs or the Department of Defense confirming that you have a service-connected disability; that is, a health condition or impairment caused or made worse by military service?" and (asked of those who said yes) "Did you receive a VA disability rating?" People who applied for and received a service-connected disability rating are classified as having a service-connected disability. People who applied for but did not receive a service-connected disability rating are classified as without a service-connected disability.

Service-connected disability rating is based on answers to the question, "What is your current VA service-connected disability rating?" Answers can range from 0 to 100 percent, in increments of 10 percentage points. Ratings are determined by the VA or DoD from a rating schedule published in the Code of Federal Regulations, Title 38, "Pensions, Bonuses, and Veterans' Relief," Part 4—"Schedule for Rating Disabilities." The rating schedule is "primarily a guide in the evaluation of disability resulting from all types of diseases and injuries encountered as a result of or incident to military service. The percentage ratings represent as far as can practicably be determined the average impairment in earning capacity resulting from such diseases and injuries and their residual conditions in civil occupations." Part 4 contains a listing of hundreds of possible disorders and assigns ratings of 0 through 100 percent, with instructions for rating multiple disorders.

Reserve and National Guard membership refers only to Gulf War-era veterans who are current or past members of the Reserve or National Guard. Members of the Reserve and National Guard are counted as veterans if they had ever been called to active duty. These data do not refer to all persons who may have ever served in the Reserve or National Guard. Beginning in August 2021, Reserve or National Guard status is obtained from answers to the question asked of veterans, "Have you ever been a member of the Reserve or National Guard?"

Reliability of the estimates

Statistics based on the CPS are subject to both sampling and nonsampling error. When a sample, rather than the entire population, is surveyed, there is a chance that the sample estimates will differ from the true population values they represent. The component of this difference that occurs because samples differ by chance is known as *sampling error*, and its variability is measured by the standard error of the estimate. There is about a 90-percent chance, or level of confidence, that an estimate based on a sample will differ by no more than 1.6 standard errors from the true population value because of sampling error. BLS analyses are generally conducted at the 90-percent level of confidence.

The CPS data also are affected by *nonsampling error*. Nonsampling error can occur for many reasons, including the failure to sample a segment of the population, the inability to obtain information for all respondents in the sample, the inability or unwillingness of respondents to provide correct information, and errors made in the collection or processing of the data.

Information about the reliability of national data from the CPS and instructions on how to generate standard errors are available at www.bls.gov/cps/documentation.htm#reliability.

For a discussion of the reliability of state estimates from the CPS, such as those in tables 6A and 6B of this release, see www.bls.gov/opub/geographic-profile/home.htm.

Comparability of the estimates

Effective with data for January 2021, estimates for veterans incorporate population controls derived from a new Department of Veterans Affairs Veteran Population Projection Model (VetPop2018). In accordance with usual practice, BLS did not revise estimates for previous years. Information about the Veteran Population Projection Model is available from the Department of Veterans Affairs at www.va.gov/vetdata/docs/Demographics/New_Vetpop_Model/VP_18_A_Brief_Description.pdf.

Table 1. Employment status of persons 18 years and over by veteran status, period of service, sex, race, and Hispanic or Latino ethnicity, 2021 annual averages

NOTE: Veterans are men and women who served on active duty in the U.S. Armed Forces and were not on active duty at the time of the survey. Nonveterans never served on active duty in the U.S. Armed Forces. Veterans could have served anywhere in the world during these periods of service: Gulf War era II (September 2001-present), Gulf War era I (August 1990-August 2001), Vietnam era (August 1964-April 1975), Korean War (July 1950-January 1955), World War II (December 1941-December 1946), and other service periods (all other time periods). Veterans are counted in only one period of service, their most recent wartime period. Veterans who served in more than one wartime period are classified in the most recent one. Veterans who served in both a wartime period and any other service period are classified in the wartime period. Estimates for the above race groups (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. Persons whose ethnicity is identified as Hispanic or Latino may be of any race. Dash indicates no data or data that do not meet publication criteria (values not shown where base is less than 35,000).

NOTE: Veterans are men and women who served on active duty in the U.S. Armed Forces and were not on active duty at the time of the survey. Nonveterans never served on active duty in the U.S. Armed Forces. Veterans could have served anywhere in the world during these periods of service: Gulf War era II (September 2001-present), Gulf War era I (August 1990-August 2001), Vietnam era (August 1964-April 1975), Korean War (July 1950-January 1955), World War II (December 1941-December 1946), and other service periods (all other time periods). Veterans are counted in only one period of service, their most recent wartime period. Veterans who served in more than one wartime period are classified in the most recent one. Veterans who served in both a wartime period and any other service period are classified in the wartime period. Dash indicates no data or data that do not meet publication criteria (values not shown where base is less than 35,000).

¹ Total includes a small number of unpaid family workers, not shown separately.

² Includes self-employed workers whose business are incorporated.

NOTE: Veterans are men and women who served on active duty in the U.S. Armed Forces and were not on active duty at the time of the survey. Nonveterans never served on active duty in the U.S. Armed Forces. Veterans could have served anywhere in the world during these periods of service: Gulf War era II (September 2001-present), Gulf War era I (August 1990-August 2001), Vietnam era (August 1964-April 1975), Korean War (July 1950-January 1955), World War II (December 1941-December 1946), and other service periods (all other time periods). Veterans are counted in only one period of service, their most recent wartime period. Veterans who served in more than one wartime period are classified in the most recent one. Veterans who served in both a wartime period and any other service period are classified in the wartime period. Dash indicates no data or data that do not meet publication criteria (values not shown where base is less than 35,000).

NOTE: Veterans are men and women who served on active duty in the U.S. Armed Forces and were not on active duty at the time of the survey. Veterans could have served anywhere in the world during these periods of service: Gulf War era II (September 2001-present), Gulf War era I (August 1990-August 2001), Vietnam era (August 1964-April 1975), Korean War (July 1950-January 1955), World War II (December 1941-December 1946), and other service periods (all other time periods). Veterans are counted in only one period of service, their most recent wartime period. Veterans who served in more than one wartime period are classified in the most recent one. Veterans who served in both a wartime period and any other service period are classified in the wartime period. A service-connected disability is a health condition or impairment caused or made worse by military service. The associated disability rating, which can range from 0 to 100 percent, is determined from a rating schedule published in the U.S. Code of Federal Regulations, "Title 38." More information appears in the Technical Note of this release. Information on the presence and severity of a service-connected disability was not collected for veterans whose service ended before the Vietnam era. Estimates for these missing responses were imputed. This affects data for the WW II, Korean War, and Vietnam era group and the other service periods group. Dash indicates no data or data that do not meet publication criteria (values not shown where base is less than 75,000).

Table 8. Employed persons 18 years and over by veteran status, presence of service-connected disability, period of service, and class of worker, August 2021, not seasonally adjusted

NOTE: Veterans are men and women who served on active duty in the U.S. Armed Forces and were not on active duty at the time of the survey. The Gulf War era began in August 1990 and continues to the present day. It is divided into two periods of service: Gulf War era II (September 2001-present) and Gulf War era I (August 1990-August 2001). Veterans are counted in only one period of service, their most recent period. Data do not include Reserve and National Guard members who have never been called to Active Duty. Dash indicates no data or data that do not meet publication criteria (values not shown where base is less than 75,000).

Table 10. Employment status of Gulf War-era II veterans 18 years and over by location of service, August 2021, not seasonally adjusted

[Numbers in thousands]

Period of service and location	Civilian noninstitutional population	Civilian labor force						Not in labor force	
		Total	Percent of population	Employed		Unemployed			
				Total	Percent of population	Number	Rate		
Total, Gulf War-era II veterans.....	4,682	3,707	79.2	3,589	76.7	118	3.2	975	
Served in Iraq, Afghanistan, or both ¹	1,905	1,516	79.6	1,476	77.5	40	2.6	390	
Served in Iraq ²	1,452	1,155	79.6	1,131	77.9	24	2.0	297	
Served in Afghanistan ³	1,001	783	78.2	748	74.7	35	4.5	218	
Served in both locations ⁴	548	423	77.2	403	73.6	19	4.6	125	
Served elsewhere.....	2,777	2,191	78.9	2,113	76.1	78	3.6	586	

¹ Refers to veterans who served in Iraq at anytime since March 2003 and veterans who served in Afghanistan at anytime since October 2001. Also includes veterans who served in both countries.

² Includes all veterans who served in Iraq at any time since March 2003, whether or not they also served in Afghanistan.

³ Includes all veterans who served in Afghanistan at any time since October 2001, whether or not they also served in Iraq.

⁴ Veterans who served in both Iraq and Afghanistan during the designated dates are also included in the totals of each location above.

NOTE: Veterans are men and women who served on active duty in the U.S. Armed Forces and were not on active duty at the time of the survey. Gulf War-era II veterans served anywhere in the world at any time since September 2001. Dash indicates no data or data that do not meet publication criteria (values not shown where base is less than 75,000).
