Consumer Price Index, Cleveland-Akron —November 2017

Local prices up 1.6 percent over the year

The Cleveland-Akron, Ohio, Consumer Price Index for All Urban Consumers (CPI-U) decreased 0.2 percent from September to November, the U.S. Bureau of Labor Statistics reported today. Assistant Commissioner for Regional Operations Charlene Peiffer noted that food prices increased 0.8 percent and energy costs were up 1.6 percent over the bi-monthly period. The index for all items less food and energy declined 0.6 percent over the past two months. Within this last category, costs were lower for apparel, new and used motor vehicles, and shelter. (Data in this report are not seasonally adjusted. Accordingly, month-to-month changes may reflect the impact of seasonal influences.)

Over the past 12 months the Cleveland area all items CPI-U rose 1.6 percent. (See [chart 1](#) and [table A](#).) The energy index advanced 15.3 percent over the year primarily due to increases in the gasoline and electricity indexes. The all items less food and energy index was 0.4 percent higher over the past 12 months. (See [table 1](#).)

Chart 1. Over-the-year percent change in CPI-U, Cleveland, November 2014–November 2017

Source: U.S. Bureau of Labor Statistics.

Food

Food prices increased 0.8 percent from September to November. Between the food index's two components, prices for food at home (groceries) and prices for food away from home (restaurant, cafeteria, and vending purchases) rose 0.9 percent and 0.6 percent, respectively, over the past two months.

From November 2016 to November 2017 overall food prices rose 2.1 percent. The index for food at home was up 2.4 percent, whereas the food away from home index increased 1.7 percent compared to November a year ago.

Energy

The energy index increased 1.6 percent from September to November. A 4.3-percent increase in gasoline prices more than offset a 1.0-percent drop in the electricity index and 0.6- percent drop in the utility (piped) gas service index.

Over the year, the energy index increased 15.3 percent. Gasoline prices rose 22.7 percent and the electricity index rose 15.2 percent. In contrast, the utility (piped) gas service index declined 1.0 percent compared to the previous November.

All items less food and energy

The index for all items less food and energy was down 0.6 percent from September to November. Among the index's components, prices were lower for apparel (-11.1 percent), new and used motor vehicles, and shelter (-0.3 percent) over the two-month period.

Over the year, the index for all items less food and energy was up 0.4 percent. An annual increase in the shelter index (2.1 percent) was the major contributing factor over the past 12 months.

Consumer Price Index Geographic Revision for 2018

In January 2018, BLS will introduce a new geographic area sample for the Consumer Price Index (CPI). As part of the new sample, the index for this area will be discontinued. Additional information on the geographic revision is available at: www.bls.gov/cpi/additional-resources/geographic-revision-2018.htm.

Technical Note

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPIs for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 89 percent of the total population and (2) a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers 28 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Each month, prices are collected in 87 urban areas across the country from about 6,000 housing units and approximately 24,000 retail establishments--department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index.

The index measures price changes from a designated reference date (1982-84) that equals 100.0. An increase of 16.5 percent, for example, is shown as 116.5. This change can also be expressed in dollars as follows: the price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1982-84 to \$11.65. For further details see the CPI home page on the Internet at www.bls.gov/cpi and the BLS Handbook of Methods, Chapter 17, The Consumer Price Index, available on the Internet at www.bls.gov/opub/hom/pdf/homch17.pdf.

In calculating the index, price changes for the various items in each location are averaged together with weights that represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Because the sample size of a local area is smaller, the local area index is subject to substantially more sampling and other measurement error than the national index. In addition, local indexes are not adjusted for seasonal influences. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. **Note: Area indexes do not measure differences in the level of prices between cities; they only measure the average change in prices for each area since the base period.**

The **Cleveland-Akron, Ohio** consolidated area covered in this release is comprised of Ashtabula, Cuyahoga, Geauga, Lake, Lorain, Medina, Portage, and Summit Counties in Ohio.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.

Note: See footnotes at end of table.

Footnotes

(1) This index series was calculated using a Laspeyres estimator. All other item stratum index series were calculated using a geometric means estimator.

(2) Index is on a December 1982=100 base.

(3) Special index based on a substantially smaller sample.

(4) Indexes on a December 1993=100 base.

(5) Indexes on a December 1997=100 base.

- Data not available.

Note: Index applies to a month as a whole, not to any specific date. Data not seasonally adjusted.
