Boston Area Employment - January 2015

Total nonfarm employment in the Boston-Cambridge-Nashua metropolitan area stood at 2,568,300 in January 2015, up 48,900 from one year ago, the U.S. Bureau of Labor Statistics reported today. Regional Commissioner Deborah A. Brown noted that nonfarm employment rose 1.9 percent locally from January a year ago compared to 2.3 percent nationwide. (See [chart 1](#) and [table 1](#); Technical note at end of release contains metropolitan area definitions. All data in this release are not seasonally adjusted; accordingly, over-the-year analysis is used throughout.)

Chart 1. Total nonfarm employment, over-the-year percent change in the United States and the Boston metropolitan area, January 2010–January 2015

Source: U.S. Bureau of Labor Statistics

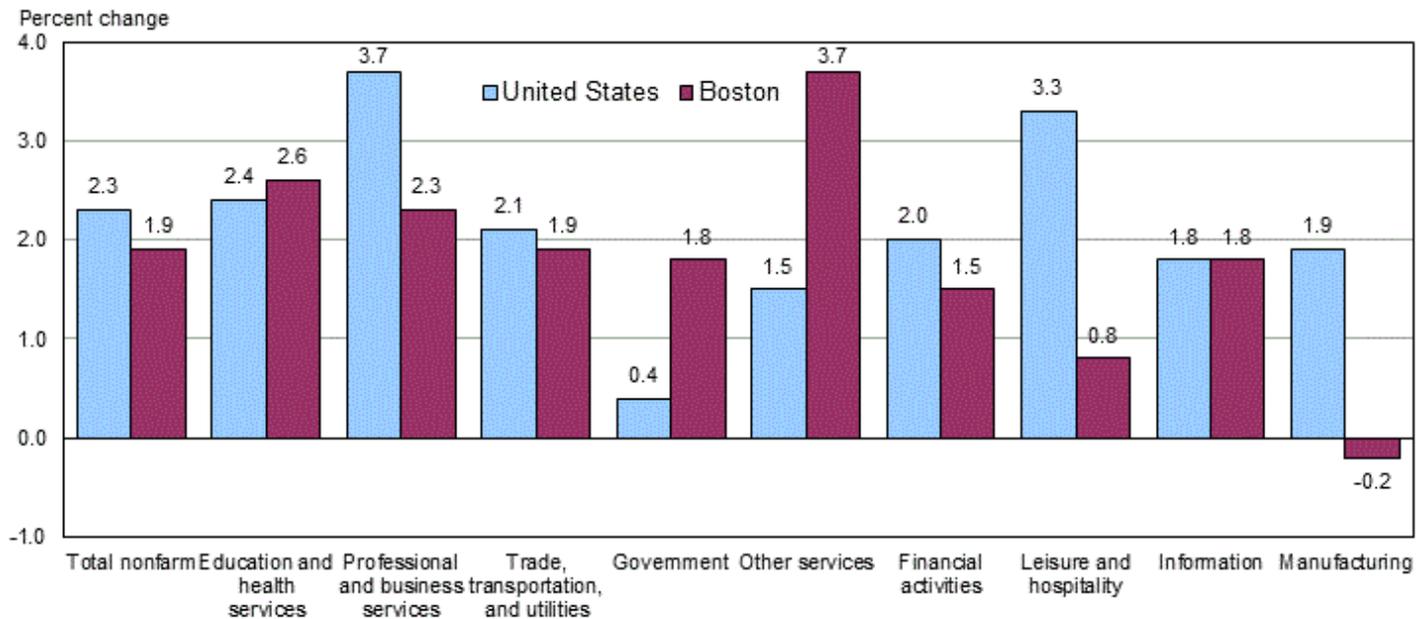

The Boston-Cambridge-Nashua area includes 10 metropolitan divisions – separately identifiable employment centers within the larger metropolitan area. The Boston-Cambridge-Newton Metropolitan Division, which made up 67 percent of the workforce, gained 31,100 jobs from January 2014 to January 2015, accounting for 64 percent of the area’s growth. The other nine divisions for which data are published also added jobs over the year.

Industry employment

Two supersectors in the Boston area – education and health services and professional and business services– accounted for almost half of the employment gain from January 2014 to January 2015. Locally, education and health services, the largest industry in the Boston area, gained 13,400 jobs. The 2.6-percent growth rate locally in this industry was higher than the national increase of 2.4 percent. Professional and business services added 9,800 jobs, a 2.3-percent gain which was lower than the national increase of 3.7 percent.

Trade, transportation, and utilities and government had the next highest annual employment gains in the Boston area from January 2014, adding 7,900 and 5,600 jobs, respectively. The 1.9-percent rate of job growth in Boston’s trade, transportation, and utilities supersector compared to the 2.1-percent gain nationwide, while the 1.8-percent rate of local job growth in the government supersector outpaced the 0.4-percent gain nationwide.

Chart 2. Total nonfarm and selected industry supersector employment, over-the-year percent change, United States and the Boston metropolitan area, January 2015

Employment in other services rose by 3,600 in the local area from January a year ago. The 3.7-percent increase in jobs locally over the 12-month period outpaced the 1.5-percent national rate. Local employment in Boston’s financial activities supersector rose by 2,500. The 1.5-percent gain was below the 2.0-percent national increase.

Employment in the 12 Largest Metropolitan Areas

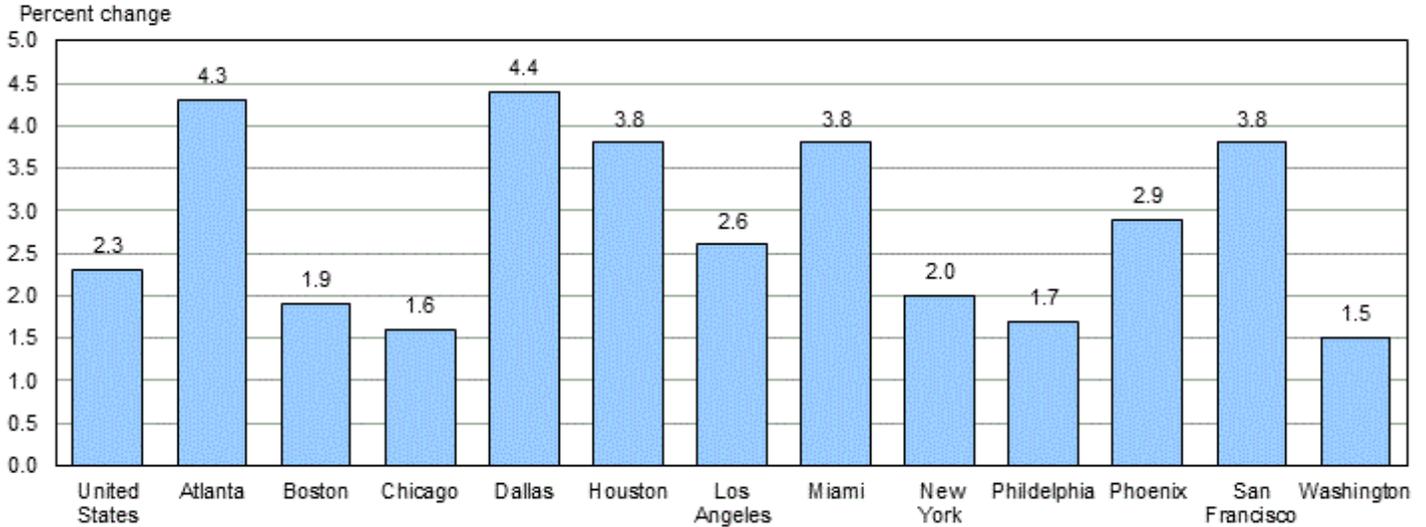

Boston was 1 of the nation’s 12 largest metropolitan statistical areas in January 2015. All 12 areas experienced over-the-year job growth during the period, with 7 exceeding the national average of 2.3 percent. The fastest rate of job growth was registered in Dallas-Fort Worth-Arlington, up 4.4 percent, followed by Atlanta-Sandy Springs-Roswell, up 4.3 percent. The slowest rates of job growth were in Washington-Arlington-Alexandria (1.5 percent) and Chicago-Naperville-Elgin (1.6 percent). (See [chart 3](#) and [table 2](#).)

The New York-Newark-Jersey City area added the largest number of jobs, 179,600. Employment in both Los Angeles-Long Beach-Anaheim and Dallas increased by over 140,000. Philadelphia-Camden-Wilmington experienced the smallest employment gain over the year, adding 45,900 jobs, followed by Washington-Arlington-Alexandria, up 46,300 jobs.

Education and health services registered the largest employment gains in 6 of the 12 metropolitan areas from January a year ago—Boston, Chicago, Los Angeles, New York, Philadelphia, and Phoenix-Mesa-Scottsdale. Professional and business services added the most jobs in four areas—Dallas, Houston-The Woodlands-Sugar Land, San Francisco-Oakland-Hayward, and Washington.

Government had the largest over-the-year loss of jobs in Miami-Fort Lauderdale-West Palm Beach, Philadelphia, and Phoenix. Manufacturing lost the most jobs in two areas—Chicago and New York. Dallas was the only area to experience no annual job losses in any supersector.

Changes to Current Employment Statistics Data

Effective with the release of January 2015 data, nonfarm payroll employment estimates for states, metropolitan areas, and metropolitan divisions were revised to reflect 2014 benchmark levels. For more information on benchmark procedures, see <https://www.bls.gov/web/empsit/cesbmart.htm>.

Revised metropolitan area and metropolitan division delineations were also implemented with the release of January 2015 data. The revised delineations were issued by the Office of Management and Budget for solely statistical purposes through Bulletin No. 13-01 on February 28, 2013, based on the application of updated statistical standards to U.S. Census Bureau population and journey-to-work data.

Note that Phoenix-Mesa-Glendale, Ariz., replaces Detroit-Warren-Dearborn, Mich., in the 12 largest metropolitan statistical areas discussion based on annual estimates of population change by the U.S. Census Bureau. For further information, see <https://www.census.gov/programs-surveys/popest/data/data-sets.2013.html>.

Technical Note

This release presents nonfarm payroll employment estimates from the Current Employment Statistics (CES) program. The CES survey is a Federal-State cooperative endeavor between State employment security agencies and the Bureau of Labor Statistics.

Definitions. Employment data refer to persons on establishment payrolls who receive pay for any part of the pay period which includes the 12th of the month. Persons are counted at their place of work rather than at their place of residence; those appearing on more than one payroll are counted on each payroll. Industries are classified on the basis of their principal activity in accordance with the 2012 version of the North American Industry Classification System.

Method of estimation. The employment data are estimated using a "link relative" technique in which a ratio (link relative) of current-month employment to that of the previous month is computed from a sample of establishments reporting for both months. The estimates of employment for the current month are obtained by multiplying the estimates for the previous month by these ratios. Small-domain models are used as the official estimators for approximately 39 percent of CES published series which have insufficient sample for direct sample-based estimates.

Annual revisions. Employment estimates are adjusted annually to a complete count of jobs, called benchmarks, derived principally from tax reports which are submitted by employers who are covered under state unemployment insurance (UI) laws. The benchmark information is used to adjust the monthly estimates between the new benchmark and the preceding one and also to establish the level of employment for the new benchmark month. Thus, the benchmarking process establishes the level of employment, and the sample is used to measure the month-to-month changes in the level for the subsequent months.

Reliability of the estimates. The estimates presented in this release are based on sample survey and administrative data and thus are subject to sampling and other types of errors. Sampling error is a measure of sampling variability—that is, variation that occurs by chance because a sample rather than the entire population is surveyed. Survey data are also subject to nonsampling errors, such as those which can be introduced into the data collection and processing operations. Estimates not directly derived from sample surveys are subject to additional errors resulting from the special estimation processes used. The sums of individual items may not always equal the totals shown in the same tables because of rounding.

Employment estimates. Measures of sampling error for state CES data at the supersector level are available on the BLS Web site at www.bls.gov/sae/790stderr.htm. Information on recent benchmark revisions for states is available at www.bls.gov/sae/.

Additional information

More complete information on the technical procedures used to develop these estimates and additional data appear in *Employment and Earnings*, which is available online at www.bls.gov/opub/ee/home.htm. Industry employment data for states and metropolitan areas from the Current Employment Statistics program are also available in the above mentioned news releases and from the Internet at www.bls.gov/sae/.

Area definitions. The substate area data published in this release reflect the standards and definitions established by the U.S. Office of Management and Budget on February 28, 2013. A detailed list of geographic definitions is available at www.bls.gov/lau/lausmsa.htm.

Areas in the six New England states are defined as Metropolitan New England City and Town Areas (NECTAs), while areas in other states are county-based and identified as metropolitan areas and metropolitan divisions. However, for comparative purposes, the Boston NECTA and its divisions have been referred to as a metropolitan area and metropolitan divisions.

The Boston-Cambridge-Nashua, Mass.-N.H. Metropolitan New England City and Town Area (NECTA) includes 10 NECTA divisions--subdivisions of the larger NECTA which function as distinct social, economic, and cultural areas within the larger region. The NECTA divisions that compose the Boston-Cambridge-Nashua, MA-NH NECTA include: Boston-Cambridge-Newton, MA, Brockton-Bridgewater-Easton, MA, Framingham, MA, Haverhill- Newburyport-Amesbury town, MA-NH, Lawrence-Methuen town-Salem, MA-NH, Lowell-Billerica-Chelmsford, MA-NH, Lynn-Saugus-Marblehead, MA, Nashua, NH-MA, Peabody-Salem-Beverly, MA, Taunton- Middleborough-Norton, MA, and select cities and towns within.

Information in this release will be made available to sensory impaired individuals upon request: voice phone: (202)-691-5200; Federal Relay Service: (800)-877-8339.
