Employer-Reported Workplace Injuries and Illnesses in Oregon – 2019

Over 51,000 nonfatal workplace injuries and illnesses were reported among Oregon’s private industry employers in 2019, resulting in an incidence rate of 3.9 cases per 100 full-time equivalent workers, the U.S. Bureau of Labor Statistics reported today. (See [table A.](#)) Assistant Commissioner for Regional Operations Richard Holden noted that Oregon was among 20 states that had an incidence rate of total recordable cases (TRC) significantly higher than the national rate of 2.8. (Oregon was 1 of 41 states and the District of Columbia for which statewide estimates are available. See Technical Note at the end of this release for more information about the survey.)

Oregon’s findings from the 2019 Survey of Occupational Injuries and Illnesses include:

- TRC incidence rates in private industry ranged from 0.8 in financial activities to 5.2 in natural resources and mining. (See [table 1.](#))
- Three supersectors, with 50 percent of private industry employment, accounted for 61 percent of the occupational injuries and illnesses: trade, transportation, and utilities; education and health services; and manufacturing. (See [table 2.](#))
- In private industry, the TRC injury and illness incidence rate ranged from 2.5 for establishments employing fewer than 11 workers to 4.5 for establishments employing 50 to 249 workers. (See [table 3.](#))
- Oregon’s private industry TRC rate of 3.9 in 2019 was not significantly different from 2018. (See [table 4.](#))

Table A. Number and rate of nonfatal occupational injuries and illnesses in private industry, United States and Oregon, 2019

Characteristic	United States		Oregon	
	Number (in thousands)	Rate (per 100 workers)	Number (in thousands)	Rate (per 100 workers)
Total cases	2,814.0	2.8	51.3	3.9
Cases with days away from work, job transfer, or restriction.....	1,558.2	1.5	30.1	2.3
Cases with days away from work.....	888.2	0.9	19.4	1.5
Cases with job transfer or restriction.....	670.0	0.7	10.7	0.8
Other recordable cases.....	1,255.7	1.2	21.2	1.6

Note: Because of rounding, components may not add to totals.

Private industry injury and illness case types

Of the 51,300 private industry injury and illness cases reported in Oregon, 30,100 were of a more severe nature, involving days away from work, job transfer, or restriction—commonly referred to as DART cases. These cases occurred at a rate of 2.3 cases per 100 full-time workers. Sixty-four percent of the DART cases in Oregon were incidents that resulted in at least one day away from work, compared to 57 percent nationally.

Other recordable cases (those not involving days away from work, job transfer, or restriction) accounted for the remaining 21,200 cases in Oregon, at a rate of 1.6. In comparison, the national rate for other recordable cases was 1.2.

In Oregon, the professional and business services industry supersector experienced a significant increase in the TRC rate from the previous year. The trade, transportation, and utilities industry supersector experienced a significant increase in the DART incidence rate. No other private industry supersector had a significant change in the TRC or DART rate over the year.

In 2019, approximately 49,100 (95.7 percent) of private industry recordable injuries and illnesses were injuries. Workplace illnesses accounted for an additional 2,200 recordable cases.

State and local government injury and illness cases

In the state and local government sector in Oregon, 7,900 injury and illness cases were reported in 2019, resulting in a rate of 4.3 cases per 100 full-time workers. Nationally, the rate was 4.6. Eighty-seven percent of injuries and illnesses reported in Oregon's public sector occurred among local government workers.

State estimates

Private industry and public sector estimates are available for 41 participating states and for the District of Columbia for 2019. The private industry injury and illness rate was statistically higher in 20 states than the national rate of 2.8 cases per 100 full-time workers, lower in 14 states and in the District of Columbia, and not statistically different in 7 states. Caution should be taken when comparing rates among different states as some differences can be attributed to different industry composition within each state.

Coronavirus (COVID-19) Pandemic Impact on the Survey of Occupational Injuries and Illnesses

Estimates in this news release are for reference year 2019. No changes in estimation procedures or outputs were necessary due to COVID-19. Additional information is available at www.bls.gov/covid19/effects-of-covid-19-on-workplace-injuries-and-illnesses-compensation-andoccupational-requirements.htm.

Technical Note

The Survey of Occupational Injuries and Illnesses (SOII) is a Federal/State cooperative program that publishes estimates on nonfatal occupational injuries and illnesses. Each year, approximately 200,000 employers report for establishments in private industry and the public sector (state and local government). In-scope cases include work-related injuries or illnesses to workers who require medical care beyond first aid. See the Occupational Safety and Health Administration (OSHA) for the entire [recordkeeping guidelines](#). The SOII excludes all work-related fatalities as well as nonfatal work injuries and illnesses to the self-employed, to workers on farms with 10 or fewer employees, to private household workers, to volunteers, and to federal government workers. For more information on the scope and sampling methodology see the [SOII Handbook of Methods](#).

Information in this release will be made available to individuals with sensory impairments upon request. Voice phone: (202)-691-5200; Federal Relay Service: (800)-877-8339.

Table 1. Incidence rates of nonfatal occupational injuries and illnesses by industry sector and case type, Oregon, 2019

Industry ⁽¹⁾⁽²⁾⁽³⁾	Total recordable cases	Cases with days away from work, job transfer, or restriction			Other recordable cases
		Total	Cases with days away from work ⁽⁴⁾	Cases with job transfer or restriction	
All industries including state and local government ...	3.9	2.3	1.5	0.8	1.7

State and local government.....	4.3	2.2	1.5	0.6	2.1
State government.....	2.9	1.9	1.5	0.4	1.0
Local government.....	4.6	2.2	1.5	0.7	2.4

Footnotes:

(1) Excludes farms with fewer than 11 employees.

(2) Data for mining (Sector 21 in the North American Industry Classification System, 2012 edition) include establishments not governed by the Mine Safety and Health Administration (MSHA) rules and reporting, such as those in oil and gas extraction and related support activities. Data for mining operators in coal, metal, and nonmetal mining are provided to BLS by the Mine Safety and Health Administration, U.S. Department of Labor. Independent mining contractors are excluded from the coal, metal, and nonmetal mining industries. These data do not reflect the changes the Occupational Safety and Health Administration made to its recordkeeping requirements effective January 1, 2002; therefore estimates for these industries are not comparable to estimates in other industries.

(3) Data for employers in rail transportation are provided to BLS by the Federal Railroad Administration, U.S. Department of Transportation.

(4) Days-away-from-work cases include those that result in days away from work with or without job transfer or restriction.

Note: Because of rounding, components may not add up to totals. Dashes indicate data not available.

Incidence rates represent the number of injuries and illnesses per 100 full-time workers and were calculated as: $(N/EH) \times 200,000$ where: N = number of injuries and illnesses; EH = total hours worked by all employees during the calendar year; and 200,000 = base for 100 equivalent full-time workers (working 40 hours per week, 50 weeks per year).
